

FracNow™ SuperFrac™

Modular, Single-line High-pressure Missile System

Reduce pump cavitation, rig up quickly, transition faster from pad to pad

TechnipFMC's proven FracNow™ SuperFrac™ System is a modular, single-line, high-pressure hydraulic fracturing missile system with superior low-pressure distribution. Our proprietary low-pressure blender distribution design provides equal frac fluid supply to well service pumps, thus reducing pump cavitation and ensuring optimal pump performance. Ready to rig up on location, our SuperFrac™ System reduces iron connections and is most easily configured to fit your frac pad design. On high-pressure inlets, the SuperFrac™ System is configured with Weco 1505 wing union or Grayloc® C-hub clamp connections to reduce fatigue cracking. It can be configured with either plug valves and/or check valves.

For additional performance, the SuperFrac™ system can be combined with our 7-inch check valve utility skid system and Ground Level Frac System (GLFS) compact manifold or other manifold systems, thereby providing a seamless single-line big bore system to the frac tree. The FracNow™ SuperFrac™ System helps minimize NPT and reduces time on pad while lowering total cost of ownership.

System specifications: API flange connections; 15k psi; Up to 120 BPM; 1505 wing unions or Grayloc® C-hub clamp connections; single-line outlet option with **7-inch check valve and utility skid**; Four pump trucks per pod.

Why use the SuperFrac™ System?

Well service pump

- ▶ Reduced pump cavitation with unique low-pressure distribution design
- ▶ Lower pump maintenance

Operational efficiency

- ▶ Ready on site for fast rig up and pad-to-pad transitions
- ▶ Specifically designed to eliminate NPT vibration issues

Modular

- ▶ Most easily configured to fit your frac pad design
- ▶ Fit-for-purpose hydraulic fracturing operations

Safety

- ▶ 85% fewer iron connections in most pad configurations
- ▶ Single-line system
