

FracNow™ Tree and Manifold Systems

Any pump rate. Any pressure. Anywhere.

As a pioneer in the unconventional shale market since 2004, TechnipFMC's FracNow™ Tree and Manifold System is tailor-made for complete full-bore delivery through a rigid system or WellFlex™ solution. Our flexible modular system is delivered, installed and connected to multiple frac trees before the pumping crew arrives. The manifold isolates each well to safely allow simultaneous operations (SIMOPs).

Time and Efficiency (TE) Vertical System

TE Vertical System offers you time savings and pumping efficiencies when stimulating multiple wells on a single pad. The vertical system configuration not only allows you to frac more stages per day, but also provides you with a cost-effective compact footprint.

Ground Level (GL) System

Developed directly through a customer partnership, the GL System delivers additional safety and efficiency benefits by lowering the overall height. This ground level system is an essential tool for unconventional operators who use SIMOPs to reduce development costs.

System specifications: Multi-well pad stimulations; designed and maintained in accordance with API 6A guidelines

To purchase or get more information, contact your TechnipFMC sales representative, email Surface.INTLSales@TechnipFMC.com or call +1 800 772 8582

Reliable

- ▶ 99% valve reliability, especially when coupled with FracNow™ products
- ▶ Erosion resistant with proprietary technology
- ▶ Robust maintenance intervals

Modular

- ▶ Manual to hydraulic transition without retest
- ▶ Multiple vertical and horizontal configurations
- ▶ Continuous pumping on multi-well stimulation

Streamlines

- ▶ Simplified and organized frac spread
- ▶ Safer installation and operation
- ▶ Fewer connections
