(Zip Code)

Registrant's telephone number, including area code: 281/591-4000

Securities registered pursuant to Section 12(b) of the Act:

<u>Title of each class</u>	<u>Name of each exchange on which registered</u>
Common Stock, \$0.01 par value	New York Stock Exchange
Preferred Share Purchase Rights	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: None

INDICATE BY CHECK MARK IF THE REGISTRANT IS A WELL-KNOWN SEASONED ISSUER, AS DEFINED IN RULE 405 OF THE SECURITIES ACT YES NO

INDICATE BY CHECK MARK IF THE REGISTRANT IS NOT REQUIRED TO FILE REPORTS PURSUANT TO SECTION 13 OR 15(d) OF THE EXCHANGE ACT YES NO

INDICATE BY CHECK MARK WHETHER THE REGISTRANT (1) HAS FILED ALL REPORTS REQUIRED TO BE FILED BY SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934 DURING THE PRECEDING 12 MONTHS (OR FOR SUCH SHORTER PERIOD THAT THE REGISTRANT WAS REQUIRED TO FILE SUCH REPORTS), AND (2) HAS BEEN SUBJECT TO SUCH FILING REQUIREMENTS FOR THE PAST 90 DAYS. YES NO

INDICATE BY CHECK MARK IF DISCLOSURE OF DELINQUENT FILERS PURSUANT TO ITEM 405 OF REGULATION S-K IS NOT CONTAINED HEREIN, AND WILL NOT BE CONTAINED, TO THE BEST OF REGISTRANT'S KNOWLEDGE, IN DEFINITIVE PROXY OR INFORMATION STATEMENTS INCORPORATED BY REFERENCE IN PART III OF THIS FORM 10-K OR ANY AMENDMENT TO THIS FORM 10-K.

INDICATE BY CHECK MARK WHETHER THE REGISTRANT IS A LARGE ACCELERATED FILER, AN ACCELERATED FILER, OR A NON-ACCELERATED FILER. SEE DEFINITION OF "ACCELERATED FILER AND LARGE ACCELERATED FILER" IN RULE 12b-2 OF THE EXCHANGE ACT.

LARGE ACCELERATED FILER ACCELERATED FILER NON-ACCELERATED FILER

INDICATE BY CHECK MARK WHETHER THE REGISTRANT IS A SHELL COMPANY (AS DEFINED IN RULE 12b-2 OF THE EXCHANGE ACT). YES NO

THE AGGREGATE MARKET VALUE OF THE REGISTRANT'S COMMON STOCK HELD BY NON-AFFILIATES OF THE REGISTRANT, DETERMINED BY MULTIPLYING THE OUTSTANDING SHARES ON JUNE 29, 2007, BY THE CLOSING PRICE ON SUCH DAY OF \$39.61 AS

REPORTED ON THE NEW YORK STOCK EXCHANGE, WAS \$3,356,476,220.*

THE NUMBER OF SHARES OF THE REGISTRANT'S COMMON STOCK, \$0.01 PAR VALUE, OUTSTANDING AS OF FEBRUARY 20, 2008 WAS 129,953,514.

PART I

ITEM 1. BUSINESS

OVERVIEW

We are a global provider of technology solutions for the energy industry and other industrial markets. We design, manufacture and service technologically sophisticated systems and products such as subsea production and processing systems, surface wellhead production systems, high pressure fluid control equipment, measurement solutions, and marine loading systems for the oil and gas industry. We also produce food processing equipment for the food industry and specialized equipment to service the aviation industry. Our business segments are Energy Systems (comprising Energy Production Systems and Energy Processing Systems), FoodTech and Airport Systems. Financial information about our business segments is incorporated herein by reference from Note 18 to our consolidated financial statements included in Item 8 of this Annual Report on Form 10-K.

We were incorporated in November 2000 under Delaware law and were a wholly owned subsidiary of FMC Corporation until our initial public offering in June 2001, when 17% of our common stock was sold to the public. On December 31, 2001, FMC Corporation distributed its remaining 83% ownership of our stock to FMC Corporation's stockholders in the form of a dividend. Our principal executive offices are located at 1803 Gears Road, Houston, Texas 77067. As used in this report, except where otherwise stated or indicated by the context, all references to "FMC Technologies," "we," "us," or "our" are to FMC Technologies, Inc. and its consolidated subsidiaries.

Our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q and Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended, are available free of charge through our website at www.fmctechnologies.com, under "Investor Center – SEC Filings." Our Annual Report on Form 10-K for the year ended December 31, 2007, is also available in print to any stockholder free of charge upon written request submitted to Jeffrey W. Carr, General Counsel and Secretary, FMC Technologies, Inc., 1803 Gears Road, Houston, Texas, 77067.

Throughout this Annual Report on Form 10-K, we incorporate by reference certain information from our Proxy Statement for the 2008 Annual Meeting of Stockholders. The SEC allows us to disclose important information by referring to it in that manner. Please refer to such information. We provide stockholders with an annual report containing financial information that has been examined and reported upon, with an opinion expressed thereon by an independent registered public accounting firm. On or about April 2, 2008, our Proxy Statement for the 2008 Annual Meeting of Stockholders will be available on our website under "Investor Center – SEC Filings." Similarly, our 2007 Annual Report to Stockholders will be available on our website under "Investor Center – Annual Reports."

BUSINESS SEGMENTS

Energy Production Systems

Energy Production Systems designs and manufactures systems and provides services used by oil and gas companies involved in land and offshore, including deepwater, exploration and production of crude oil and gas. Our production systems control the flow of oil and gas from producing wells. We specialize in offshore production systems and have manufacturing facilities near most of the world's principal offshore oil and gas producing basins. We market our products primarily through our own technical sales organization. Energy Production Systems revenue comprised approximately 62%, 60% and 57% of our consolidated revenue in 2007, 2006 and 2005, respectively.

Principal Products and Services

Subsea Production Systems. Subsea systems represented approximately 49%, 47%, and 45% of our consolidated revenues in 2007, 2006, and 2005, respectively. Our systems are used in the offshore production of crude oil and natural gas. Subsea systems are placed on the seafloor and are used to control the flow of crude oil and natural gas from the reservoir to a host processing facility, such as a floating production facility, a fixed platform, or an onshore facility. Our subsea equipment is remotely controlled by the host processing facility.

The design and manufacture of our subsea systems require a high degree of technical expertise and innovation. Some of our systems are designed to withstand exposure to the extreme hydrostatic pressure that deepwater environments present as well as internal pressures of up to 15,000 pounds per square inch and temperatures in excess of 350° F. The foundation of this business is our technology and engineering expertise.

Table of Contents

The development of our integrated subsea systems usually includes initial engineering design studies, subsea trees, control systems, manifolds, seabed template systems, flowline connection and tie-in systems, installation and workover tools, and subsea wellheads. In order to provide these systems and services, we utilize engineering, project management, global procurement, manufacturing, assembly and testing capabilities. Further, we provide service technicians for installation assistance and field support for commissioning, intervention and maintenance of our subsea systems throughout the life of the oilfield. Additionally, we provide tools such as our riserless light well intervention system for certain well workover and intervention tasks.

Surface Production Systems. In addition to our subsea systems that control the flow of oil and natural gas from deepwater locations, we provide a full range of surface wellheads and production systems for both standard service and critical service applications. Surface production systems, or trees, are used to control and regulate the flow of oil and gas from the well. Our surface products and systems are used worldwide on both land and offshore platforms and can be used in difficult climatic conditions, such as arctic cold or desert high temperatures. We support our customers through leading engineering, manufacturing, field installation support, and aftermarket services. Surface products and systems represented approximately 13%, 12%, and 11% of our consolidated revenues in 2007, 2006, and 2005, respectively.

Separation Systems. We design and manufacture systems that separate production flows from wells into oil, gas and water. Our separation technology improves upon conventional separation technologies by moving the flow in a spiral, spinning motion. This causes the elements of the flow stream to separate more efficiently. These systems are currently capable of operating on surface systems onshore or on offshore facilities, and we began successful subsea operation in 2007.

Status of Product Development

We continue to advance the development of subsea separation processing technologies. Subsea processing is an emerging technology in the industry, which we believe offers considerable benefits to the oil and gas producer, enabling a more rapid and cost-efficient approach to separation. If separation is performed on the seabed, the hydrostatic pressure of the fluid going from the seabed to the surface is reduced, allowing the well to flow more efficiently, accelerating production and enabling higher recoveries from the subsea reservoir. Also, it can significantly reduce the capital investment required for floating vessels or platforms, since the integration of processing capabilities will not be required. We introduced this technology commercially with StatoilHydro's Tordis field in the North Sea during 2007. Another enhancement to separation technology, inline separation, adds the efficient design of a small pipe to separate the oil and gas during production. Inline separators will be a cost-effective option in a number of surface and subsea applications, requiring only 20% of the weight and space required by most conventional separator systems.

Another subsea processing technology we believe will serve this industry in the future is gas compression in subsea applications. Subsea gas compression allows the operator to maintain gas production as the reservoir pressure declines. It also boosts gas pressure and allows for transportation of the gas to shore without the need for surface facilities. We are currently developing a subsea gas compression system suitable for large pressure ratios and volume flow.

Capital Intensity

Most of the systems and products that we supply for subsea applications are highly engineered to meet the unique demands of our customers and are typically ordered one or two years prior to installation. We commonly receive advance and progress payments from our customers in order to fund initial development and our working capital requirements. In addition, due to factors such as higher engineering content and our manufacturing strategy of outsourcing certain low value-added manufacturing activities, we believe that our Energy Production Systems business is less capital intensive than our competitors' businesses.

Dependence on Key Customers

Generally, our customers in this segment are major integrated oil or exploration and production companies.

With our integrated systems for subsea production, we have aggressively pursued alliances with oil and gas companies that are actively engaged in the subsea development of crude oil and natural gas. Development of subsea fields, particularly in deepwater environments, involves substantial capital investments by our customers. Our customers have sought the security of alliances with us to ensure timely and cost-effective delivery of subsea and other energy-related systems that provide an integrated solution to their needs. Our alliances establish important ongoing relationships with our customers. While our alliances do not always contractually commit our customers to purchase our systems and services, they have historically led to, and we expect that they will continue to result in such purchases. For instance, we have such an alliance with StatoilHydro. In 2007, we generated approximately 10% of our consolidated revenues from StatoilHydro.

Table of Contents

The loss of one or more of our significant oil and gas company customers could have a material adverse effect on our Energy Production Systems business segment.

Competition

Energy Production Systems competes with other companies that supply subsea systems, surface production equipment, and separation systems, and with smaller companies that are focused on a specific application, technology or geographical niche in which we operate. Companies such as Cameron International Corporation, GE Vetco Gray, Aker Kværner ASA, and Wood Group compete with us in the marketplace across our various product lines.

Some of the factors on which we compete include reliability, cost-effective technology, execution, and delivery. Our competitive strengths include our intellectual capital, experience base and breadth of technologies and products that enable us to design a unique solution for our customers' project requirements while incorporating standardized components to contain costs. We have a strong presence in all of the major producing basins. Our deepwater expertise, experience and technology help us to maintain a leadership position in subsea systems.

Energy Processing Systems

Energy Processing Systems designs, manufactures and supplies technologically advanced high pressure valves and fittings for oilfield service customers. We also manufacture and supply liquid and gas measurement and transportation equipment and systems to customers involved in the production, transportation and processing of crude oil, natural gas and petroleum-based refined products. We sell to the end user through authorized representatives, distributor networks and our own technical sales organization. The segment's products include fluid control, measurement solutions, loading systems, material handling systems and blending and transfer systems. Energy Processing Systems revenue comprised approximately 17%, 18% and 17% of our consolidated revenue in 2007, 2006 and 2005, respectively.

Principal Products and Services

Fluid Control. We design and manufacture flowline products, under the WECO®/Chiksan® trademarks, and pumps and valves used in well completion and stimulation activities by major oilfield service companies, such as Schlumberger Limited, BJ Services Company, Halliburton Company and Weatherford.

Our flowline products are used in equipment that pumps corrosive and/or erosive fluid into a well during the well construction or stimulation process. Our reciprocating pump product line includes duplex, triplex and quintuplex pumps utilized in a variety of applications. The performance of this business typically rises and falls with variations in the active rig count throughout the world.

Measurement Solutions Systems. Our measurement systems provide solutions for use in custody transfer of crude oil, natural gas and refined products. We combine advanced measurement technology with state-of-the-art electronics and supervisory control systems to provide the measurement of both liquids and gases for purposes of verifying ownership and determining revenue and tax obligations. Our Smith Meter product lines are well-established in the industry. We are one of only a few suppliers of multi-path, ultrasonic flow meters for custody transfer of petroleum liquids and natural gas.

Loading Systems. We provide land and marine-based fluid loading and transfer systems primarily to the oil and gas industry. Our systems are capable of loading and offloading marine vessels transporting a wide range of fluids, such as crude oil, liquefied natural gas and refined products. While these systems are typically constructed on a fixed jetty platform, we have also developed advanced loading systems that can be mounted on a vessel or structure to facilitate ship-to-ship or tandem loading and offloading operations in open seas or exposed locations.

Material Handling Systems. We provide material handling systems, including bulk conveying systems to the power generation industry. We provide innovative solutions for conveying, feeding, screening and orienting bulk product for customers in diverse industries. Our process, engineering, mechanical design and project management expertise enable us to execute these projects on a turnkey basis.

Blending and Transfer Systems. We provide engineering, design and construction management services in connection with the application of blending technology, process controls and automation for manufacturers in the lubricant, petroleum, additive, fuel and chemical industries.

Dependence on Key Customers

No single Energy Processing Systems customer accounts for more than 10% of our annual consolidated revenue.

[Table of Contents](#)

Competition

Energy Processing Systems currently has the first or second largest market share for its primary products and services. Some of the factors upon which we compete include technological innovation, reliability and product quality. Energy Processing Systems competes with a number of companies primarily in the gas and liquid custody transfer, high-pressure pumping services, and fluid loading and transfer systems industries.

FoodTech

Principal Products and Services

FoodTech designs, manufactures and services technologically sophisticated food processing systems used primarily for fruit juice production, frozen food production, shelf-stable food production and convenience food preparation for the food industry. We market our systems through our own technically oriented sales and marketing personnel and, in some cases, through independent distributors and sales representatives. We have customers and business operations throughout the world, and FoodTech's equipment is used in more than 100 countries. We serve these markets through our principal production facilities in the United States (Ohio, California and Florida), Belgium, Brazil, South Africa, China, Italy and Sweden. FoodTech revenue comprised approximately 13%, 13% and 16% of our consolidated revenue in 2007, 2006 and 2005, respectively.

We supply citrus juice extractors and related citrus processing equipment for use in citrus processing plants, and aseptic juice and pulp systems. Some of our equipment is provided under full-service leases for which we are paid annual fixed rates plus, in some cases, payments based on production volumes. We develop new extraction technologies to provide more value to customers and to increase our competitive advantage in yield and efficiencies.

We design, assemble and sell a number of industry-leading freezing technologies including individual quick freezing, self-stacking spiral freezer systems and impingement freezing technologies. Our equipment is used for a variety of frozen food products, such as meat, seafood, poultry, bakery products, ready-to-serve meals, fruits, vegetables and dairy products.

We also manufacture and supply an array of equipment and services that enable us to provide integrated systems for the processing of a variety of convenience foods. Our products include coating and cooking systems, portioners, such as our water jet portioners, and continuous batter-breading, frying and oven-cooking equipment.

We are a global supplier of commercial sterilization systems used for the production of shelf-stable and pasteurized packaged foods including fruits, vegetables, soups, milk and a broad range of ready-to-serve meals. These systems may include a filler, a closer, a sterilizer and a control system. We also supply tomato processing equipment.

Seasonality

Due primarily to the seasonal nature of fruit production, FoodTech revenue is typically greater in the second and fourth quarters of each year.

Dependence on Key Customers

FoodTech is a major supplier of citrus processing equipment and services to large citrus processors. We have signed multiyear full-service lease contracts to supply these customers with our equipment and services. The loss of one or more of these customers could have a material adverse effect on our FoodTech business segment.

Competition

FoodTech competes with a variety of local and regional companies typically focused on a specific application, technology or geographic area, and with a few large multinational companies. In each of our markets we have the first or second largest market share. Some of the factors upon which we compete include technology, system integration, high product quality and reliability, safety and quality aftermarket services. Our ability to source from multiple locations around the world helps us to respond to the market conditions that affect the industries we serve, which we believe provides an advantage over local or regional companies. Our continuing presence with our installed base of products and systems and our aftermarket business enables us to tailor and apply our development efforts to fit our customers' specific requirements.

The food industry is undergoing continuing consolidation as food processors are subject to growing pressure to increase efficiency and lower costs to maintain profitability. Major food processors are increasing their purchasing power through these consolidations with other food processors. As a result, they are seeking technologically sophisticated integrated systems and services, such as those we provide, to maximize the efficiency of their operations, while maintaining high standards of food safety.

Table of Contents

Airport Systems

Principal Products and Services

Airport Systems is a global supplier of passenger boarding bridges, cargo loaders, and other ground support products, as well as airport management services. We design, manufacture and service technologically advanced equipment and systems primarily for commercial airlines, air freight companies, and airport authorities. These products are sold and marketed through our own technically oriented sales force as well as through independent distributors and sales representatives. Our products are in operation in more than 90 countries around the world. Airport Systems revenue comprised approximately 8%, 9% and 10% of our consolidated revenue in 2007, 2006 and 2005, respectively.

Our Jetway® passenger boarding bridges provide passengers access from the aircraft to the terminal. In addition to passenger boarding bridges, we supply preconditioned air, potable water and power conversion systems.

We also supply cargo loaders to commercial airlines, air freight service providers, ground handlers, and the U.S. Air Force. Our cargo loaders service wide-body jet aircraft and can be configured to lift up to 30 tons. We also service the growing narrow-body aircraft market with the RampSnake® automated baggage loader. We provide other ground support equipment, such as deicers and push-back tractors.

Since 2000, we have been supplying the U.S. Air Force with a cargo loader designed specifically for military applications, commonly referred to today as the Halvorsen loader. Additionally, we began providing trailer mounted diesel air conditioner units to the U.S. Air Force in 2007. U.S. government procurement funding authorization determines the quantity ordered each year. We are actively pursuing the expansion of the market for Halvorsen loaders beyond the U.S. Air Force by marketing this unit to international customers.

We provide airport services which offer the customer centralized management of maintenance for airport facilities, passenger boarding bridges, ground support equipment and baggage systems. We also provide automated guided vehicles used in a variety of industries.

Government Contracts

U.S. defense contracts may be terminated unilaterally at the option of the U.S. government with compensation for work completed and costs incurred. Contracts with the U.S. government are subject to special laws and regulations, noncompliance with which could result in various sanctions.

Competition

Airport Systems competes with a variety of local and regional companies typically focused on a specific application, technology or geographic area, and with a few large multinational companies, including ThyssenKrupp Airport Systems, S.A. and Téléfex Lionel-Dupont (TLD). Some of the factors on which we compete include reliability, cost-effectiveness, product performance and quality. Airlines, airports and air freight companies continue to outsource an increasing amount of non-core services and search for suppliers like us who provide integrated systems and products that are supported by extensive service capabilities.

OTHER BUSINESS INFORMATION RELEVANT TO ALL OF OUR BUSINESS SEGMENTS

Order Backlog

Information regarding order backlog is incorporated herein by reference from the section entitled "Inbound Orders and Order Backlog" in Item 7 of this Annual Report on Form 10-K.

Sources and Availability of Raw Materials

All of our business segments purchase carbon steel, stainless steel, aluminum and steel castings and forgings both domestically and internationally. We do not use single source suppliers for the majority of our raw material purchases and believe the available supplies of raw materials are adequate to meet our needs.

Table of Contents

Research and Development

We are engaged in research and development activities directed primarily toward the improvement of existing products and services, the design of specialized products to meet specific customer needs and the development of new products, processes and services. A large part of our product development spending in the past has focused on the standardization of our subsea and surface product lines. With standardized products, we can minimize engineering content, improve inventory utilization, and reduce cost through value engineering. Additional financial information about Company-sponsored research and development activities is incorporated herein by reference from Note 18 to our consolidated financial statements included in Item 8 of this Annual Report on Form 10-K.

Patents, Trademarks and Other Intellectual Property

We own a number of U.S. and foreign patents, trademarks and licenses that are cumulatively important to our businesses. As part of our ongoing research and development, we seek patents when appropriate for new products and product improvements. We have approximately 1,800 issued patents and pending patent applications worldwide. Further, we license intellectual property rights to or from third parties. We also own numerous U.S. and foreign trademarks and trade names and have approximately 700 registrations and pending applications in the United States and abroad.

We vigorously defend against infringement or misappropriation of our patents and other intellectual property assets. We have initiated litigation in cases where we believe that the patents we have obtained for our technological developments, such as our innovative subsea technology, have been infringed by others. We do not believe, however, that the loss of any one patent, trademark, or license or group of related patents, trademarks, or licenses would have a material adverse effect on our overall business.

Employees

As of December 31, 2007, we had approximately 13,000 full-time employees; approximately 5,500 in the United States and 7,500 in non-U.S. locations. Only a small percentage of our U.S. employees are represented by labor unions.

Financial Information about Geographic Areas

The majority of our consolidated revenue and segment operating profit are generated in markets outside of the United States. Energy Production Systems and Energy Processing Systems revenue is dependent upon worldwide oil and gas exploration and production activity. FoodTech serves a global market, with sales to customers in North America, Europe, Asia and Latin America. Financial information about geographic areas is incorporated herein by reference from Note 18 to our consolidated financial statements in Item 8 of this Annual Report on Form 10-K.

ITEM 1A. RISK FACTORS

Important risk factors that could impact our ability to achieve our anticipated operating results and growth plan goals are presented below. You should read the following risk factors in conjunction with discussions of our business and the factors affecting our business located elsewhere in this Annual Report on Form 10-K and in our other filings with the SEC.

INDUSTRY-RELATED RISKS

- **Demand for the systems and services provided by our Energy Production Systems and Energy Processing Systems businesses depends on oil and gas industry activity and expenditure levels, which are directly affected by trends in the demand for and price of crude oil and natural gas.**

Our Energy Systems businesses are substantially dependent on conditions in the oil and gas industry and that industry's willingness and ability to spend capital on the exploration for and development of crude oil and natural gas. Any substantial or extended decline in these expenditures may result in the reduced discovery and development of new reserves of oil and gas and the reduced exploitation of existing wells, which could adversely affect demand for the systems and services of both Energy Production Systems and Energy Processing Systems. The level of spending is generally dependent on current and anticipated crude oil and natural gas prices, which have been volatile in the past.

- **Demand for the systems and services provided by our FoodTech and Airport Systems businesses is significantly dependent upon our customers' expenditures for capital equipment, and a prolonged substantial reduction in those expenditures could adversely affect the demand for our systems and services.**

[Table of Contents](#)

The demand for our FoodTech systems, equipment and services is affected by factors such as consumer demand for processed and frozen foods, conditions in the agricultural sector affecting prices and public perception of food safety and contamination. Adverse weather conditions can have significant impacts on profits in the agricultural industry which directly impact demand for FoodTech systems and services. The magnitude and/or duration of the impact of severe weather conditions on the industry are difficult to predict. Furthermore, Airport Systems customers include airport authorities, ground handlers, domestic and international commercial airlines, and air freight companies. The profitability of companies in these industries is influenced by factors including jet fuel prices and the levels of passenger and air freight activity. Changes in business strategies and capital spending levels in the airline industry due to changes in international, national, regional and local economic conditions, war, political instability and terrorism (and the threat thereof) may have a detrimental impact on demand for our systems and services.

- **The industries in which we operate or have operated expose us to potential liabilities arising out of the installation or use of our systems that could adversely affect our financial condition.**

Our Energy Systems businesses operate in an industry that is subject to equipment defects, malfunctions and failures, equipment misuse and natural disasters, the occurrence of which may result in uncontrollable flows of gas or well fluids, fires and explosions. Our FoodTech businesses supply machinery and equipment for use in food processing and handling, which creates potential exposure to personal injury and product liability claims. In addition, our Airport Services businesses supply machinery and equipment used in airports all over the world, which could expose us to substantial liability for personal injury, wrongful death, product liability, commercial claims, property damage, pollution and other environmental damages. Although we have obtained insurance against many of these risks, we cannot assure you that our insurance will be adequate to cover our liabilities. Further, we cannot assure you that insurance will generally be available in the future or, if available, that premiums will be commercially justifiable. If we incur substantial liability and the damages are not covered by insurance or are in excess of policy limits, or if we were to incur liability at a time when we are not able to obtain liability insurance, our business, results of operations or financial condition could be materially adversely affected.

- **Our customers' industries are undergoing continuing consolidation that may impact our results of operations.**

Some of our largest customers have consolidated and are using their size and purchasing power to achieve economies of scale and pricing concessions. This consolidation may result in reduced capital spending by such customers or the acquisition of one or more of our other primary customers, which may lead to decreased demand for our products and services. We cannot assure you that we will be able to maintain our level of sales to any customer that has consolidated or replace that revenue with increased business activities with other customers. As a result, this consolidation activity could have a significant negative impact on our results of operations or financial condition. We are unable to predict what effect consolidations in the industries may have on prices, capital spending by our customers, our selling strategies, our competitive position, our ability to retain customers or our ability to negotiate favorable agreements with our customers.

- **Our operations and the industries in which we operate are subject to a variety of U.S. and international laws and regulations that may increase our costs, limit the demand for our products and services or restrict our operations.**

We depend on the demand for our systems and services from oil and gas companies. This demand is affected by changing taxes, price controls and other laws and regulations relating to the oil and gas industry. For example, the adoption of laws and regulations curtailing exploration and development of drilling for crude oil and natural gas in our areas of operation for economic, environmental or other reasons could adversely affect our operations by limiting demand for our systems and services. In light of our foreign operations and sales, we are also subject to changes in foreign laws and regulations that may encourage or require hiring of local contractor or require foreign contractors to employ citizens of, or purchase supplies from, a particular non-U.S. jurisdiction.

In addition, environmental laws and regulations affect the systems and services we design, market and sell, as well as the facilities where we manufacture our systems. We are required to invest financial and managerial resources to comply with environmental laws and regulations and anticipate that we will continue to be required to do so in the future. Because these laws and regulations change frequently, we are unable to predict the cost or impact that they may have on our businesses. The modification of existing laws or regulations or the adoption of new laws or regulations imposing more stringent environmental restrictions could adversely affect our operations.

COMPANY-RELATED RISKS

- **Disruptions in the political, regulatory, economic and social conditions of the foreign countries in which we conduct business could adversely affect our business or results of operations.**

[Table of Contents](#)

We operate manufacturing facilities in 19 countries outside of the United States, and approximately 70% of our 2007 revenue was generated internationally. Instability and unforeseen changes in the international markets in which we conduct business, including economically and politically volatile areas such as North Africa, West Africa, the Middle East, Latin America and the Asia Pacific region, could cause or contribute to factors that could have an adverse effect on the demand for our systems and services, our financial condition or our results of operations. These factors include:

- foreign currency fluctuations or currency restrictions;
- fluctuations in the interest rate component of forward foreign currency rates;
- nationalization and expropriation;
- potentially burdensome taxation;
- inflationary and recessionary markets, including capital and equity markets;
- civil unrest, political instability, terrorist attacks and wars;
- seizure of assets;
- trade restrictions, trade protection measures or price controls;
- foreign ownership restrictions;
- import or export licensing requirements;
- restrictions on operations, trade practices, trade partners and investment decisions resulting from domestic and foreign laws and regulations;
- changes in governmental laws and regulations and the level of enforcement of laws and regulations;
- inability to repatriate income or capital; and
- reductions in the availability of qualified personnel.

Because a significant portion of our revenue is denominated in foreign currencies, changes in exchange rates will produce fluctuations in our costs and earnings, and may also affect the book value of our assets located outside of the U.S. and the amount of our stockholders' equity. Although it is our policy to seek to minimize our currency exposure by engaging in hedging transactions where appropriate, we cannot assure you that our efforts will be successful. To the extent we sell our products and services in foreign markets, currency fluctuations may result in our products and services becoming too expensive for foreign customers.

- **We may lose money on fixed-price contracts.**

As is customary for several of the business areas in which we operate, we agree to provide products and services under fixed-price contracts. Under these contracts, we are typically responsible for cost overruns. Our actual costs and any gross profit realized on these fixed-price contracts may vary from the estimated amounts on which these contracts were originally based. There is inherent risk in the estimation process and including significant unforeseen technical and logistical challenges or longer than expected lead times. A fixed-price contract may prohibit our ability to mitigate the impact of unanticipated increases in raw material prices (including the price of steel) through increased pricing. Depending on the size of a project, variations from estimated contract performance could have a significant impact on our operating results.

- **Due to the types of contracts we enter into, the cumulative loss of several major contracts or alliances may have an adverse effect on our results of operations.**

We often enter into large, long-term contracts and leases that, collectively, represent a significant portion of our revenue. These agreements, if terminated or breached, may have a larger impact on our operating results or our financial condition than shorter-term contracts due to the value at risk. If we were to lose several key alliances or agreements over a relatively short period of time we could experience a significant adverse impact on our financial condition or results of operations.

[Table of Contents](#)

- **Our businesses are dependent on the continuing services of certain of our key managers and employees.**

We depend on our senior executive officers and other key personnel. The loss of any of these officers or key management could adversely impact our business if we are unable to implement key strategies or transactions in their absence. In addition, competition for qualified employees among companies that rely heavily on engineering and technology (as we do) is intense. The loss of qualified employees or an inability to attract, retain and motivate additional highly skilled employees required for the operation and expansion of our business could hinder our ability to conduct research activities successfully and develop marketable products and services.

- **Increased costs of raw materials and other components may result in increase operating expenses and adversely affect our results of operations and cash flows.**

Our results of operations may be adversely affected by our inability to manage the rising costs and availability of raw materials and components used in our wide variety of products and systems. Unexpected changes in the size and timing of regional and/or product markets, particularly for short lead-time products, could affect our results of operations and our cash flows.

- **Our success depends on our ability to implement new technologies and services.**

Our success depends on the ongoing development and implementation of new product designs and improvements, and on our ability to protect and maintain critical intellectual property assets related to these developments. If we are not able to obtain patent or other protection of our technology, we may not be able to continue to develop systems, services and technologies to meet evolving industry requirements, and if so, at prices acceptable to our customers.

Some of our competitors are large national and multinational companies that may be able to devote greater resources to research and development of new systems, services and technologies than we are able to do. Moreover, some of our competitors operate in narrow business areas, allowing them to concentrate their research and development efforts directly on products and services for those areas. If we are unable to compete effectively given these risks, our business, results of operations and financial condition could be adversely affected.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

We lease our executive offices in Houston, Texas and Chicago, Illinois. We operate 33 manufacturing facilities in 19 countries.

We believe our properties and facilities meet present requirements and are in good operating condition and that each of our significant manufacturing facilities is operating at a level consistent with the requirements of the industry in which it operates.

The significant production properties for the Energy Production Systems operations currently are:

<u>Location</u>	<u>Square Feet (approximate)</u>	<u>Leased or Owned</u>
<u>United States:</u>		
Houston, Texas	390,000	Leased
<u>International:</u>		
*Kongsberg, Norway	657,000	Leased
Rio de Janeiro, Brazil	517,000	Owned
Singapore	266,000	Owned
*Sens, France	185,000	Owned
Nusajaya, Malaysia	164,000	Owned
Dunfermline, Scotland	162,000	Owned
Edmonton, Canada	82,000	Leased
Maracaibo, Venezuela	60,000	Owned

Table of Contents

ITEM 3. LEGAL PROCEEDINGS

We are named defendants in a number of multi-defendant, multi-plaintiff tort lawsuits. Under the Separation and Distribution Agreement with FMC Corporation ("FMC"), which contains key provisions relating to our 2001 spin-off from FMC, FMC is required to indemnify us for certain claims made prior to the spin-off, as well as for other claims related to discontinued operations. We expect that FMC will bear responsibility for the majority of these claims. Claims of this nature have also been asserted subsequent to the spin-off. While the ultimate responsibility for all of these claims cannot yet be determined due to lack of identification of the products or premises involved, we also expect that FMC will bear responsibility for a majority of these claims initiated subsequent to the spin-off.

[Table of Contents](#)

While the results of litigation cannot be predicted with certainty, management believes that the most probable, ultimate resolution of these matters will not have a material adverse effect on our consolidated financial position, results of operations or cash flows.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were submitted to a vote of security holders during the fourth quarter of fiscal year 2007.

Pursuant to General Instruction G(3), the information regarding our executive officers called for by Item 401(b) of Regulation S-K is hereby included in Part I of this Form 10-K.

Executive Officers of the Registrant

The executive officers of FMC Technologies, together with the offices currently held by them, their business experience and their ages as of February 29, 2008, are as follows:

<u>Name</u>	<u>Age</u>	<u>Office, year of election and other information for past five years</u>
Peter D. Kinnear	60	President and Chief Executive Officer (2007); President and Chief Operating Officer (2006); Executive Vice President (2004); Vice President (2001)
William H. Schumann, III	57	Executive Vice President and Chief Financial Officer (2007); Senior Vice President and Chief Financial Officer (2001); Treasurer (2002-2004)
John T. Grempp	56	Executive Vice President – Energy Systems (2007); Vice President and Group Manager – Energy Production (2004), General Manager (2002)
Charles H. Cannon, Jr.	55	Senior Vice President (2004); Vice President and General Manager—FoodTech and Airport Systems (2001)
Tore H. Halvorsen	53	Senior Vice President – Global Subsea Production Systems (2007); Vice President – Subsea Systems Eastern Hemisphere (2004); Managing Director of FMC Kongsberg Subsea AS (1994)
Robert L. Potter	57	Senior Vice President – Energy Processing and Global Surface Wellhead (2007); Vice President – Energy Processing Systems (2001)
Jeffrey W. Carr	51	Vice President, General Counsel and Secretary (2001)
Ronald D. Mambu	58	Vice President and Controller (2001)
Maryann T. Seaman	45	Vice President, Administration (2007); Director of Investor Relations and Corporate Development (2003)

No family relationships exist among any of the above-listed officers, and there are no arrangements or understandings between any of the above-listed officers and any other person pursuant to which they serve as an officer. During the past five years, none of the above-listed officers have been involved in any legal proceedings as defined in Item 401(f) of Regulation S-K. All officers are elected to hold office until their successors are elected and qualified.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our common stock is listed on the New York Stock Exchange under the symbol FTI. Market information with respect to our common stock is incorporated herein by reference from Note 19 to our consolidated financial statements in Item 8 of this Annual Report on Form 10-K.

As of February 20, 2008, there were 4,846 holders of record of FMC Technologies' common stock. On February 20, 2008, the last reported sales price of our common stock on the New York Stock Exchange was \$54.18.

We have not declared or paid cash dividends in 2006 or 2007, and we do not currently have a plan to pay dividends in the future.

On July 18, 2007, we announced that our Board of Directors approved a two-for-one stock split in the form of a stock dividend that was paid on August 31, 2007 to shareholders of record as of August 17, 2007.

As of December 31, 2007, our securities authorized for issuance under equity compensation plans were as follows:

	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans approved by security holders	1,293,652 ⁽¹⁾	\$ 10.45	15,795,672 ⁽²⁾
Equity compensations plans not approved by security holders	—	—	—
Total	1,293,652⁽¹⁾	\$ 10.45	15,795,672⁽²⁾

- (1) The table includes the number of shares that may be issued upon the exercise of outstanding options to purchase shares of FMC Technologies Common Stock under the FMC Technologies Incentive Compensation and Stock Plan. The table does not include shares of restricted stock that have been awarded under the FMC Technologies Incentive Compensation and Stock Plan but which have not yet vested.
- (2) The table includes shares available for future issuance under the FMC Technologies Incentive Compensation and Stock Plan, excluding the shares quantified in the first column. This number includes 3,519,597 shares available for issuance for nonvested stock awards that vest after December 31, 2007.

We had no unregistered sales of equity securities during the three months ended December 31, 2007. The following table summarizes repurchases of our common stock during the three months ended December 31, 2007.

ISSUER PURCHASES OF EQUITY SECURITIES

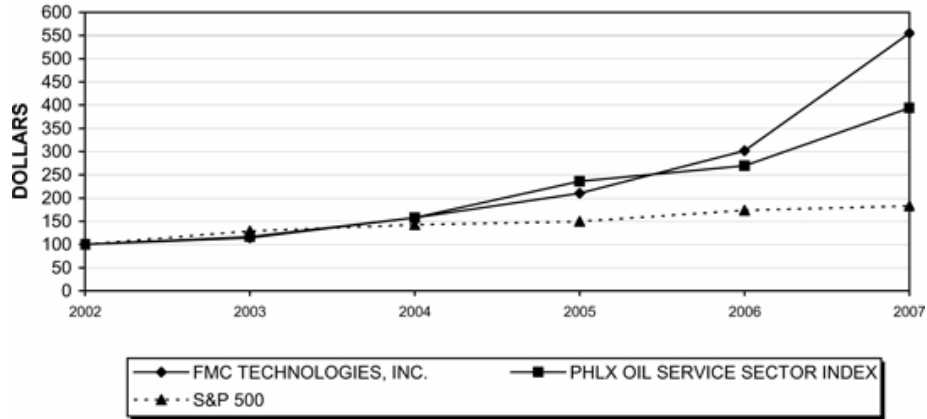

Period	Total Number of Shares Purchased ^(a)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (b)	Maximum Number of Shares that May Yet Be Purchased under the Plans or Programs (b)
October 1, 2007 – October 31, 2007	21,450	\$ 59.69	—	14,233,297
November 1, 2007 – November 30, 2007	462,570	\$ 55.96	455,250	13,778,047
December 1, 2007 – December 31, 2007	200,340	\$ 55.99	200,100	13,577,947
Total	684,360	\$ 56.08	655,350	13,577,947

- (a) Represents 655,350 shares of common stock repurchased and held in treasury and 29,010 shares of common stock purchased and held in an employee benefit trust established for the FMC Technologies, Inc. Non-Qualified Savings and Investment Plan. In addition to these shares purchased on the open market, we sold 16,620 shares of registered common stock held in this trust, as directed by the beneficiaries, during the three months ended December 31, 2007.
- (b) In 2005, we announced a repurchase plan approved by our Board of Directors authorizing the repurchase of up to two million shares of our outstanding common stock through open market purchases. The Board of Directors have

[Table of Contents](#)

authorized extensions of this program adding five million shares in February 2006 and eight million shares in February 2007 for a total of fifteen million shares of common stock authorized for repurchase. As a result of the two-for-one stock split on August 31, 2007, the authorization was increased to 30 million shares.

**COMPARISON OF 5-YEAR CUMULATIVE TOTAL RETURN
AMONG FMC TECHNOLOGIES, INC.,
S&P 500 INDEX AND OSX**

The chart compares the percentage change in the cumulative stockholder return on our common stock against the cumulative total return of the Philadelphia Oil Service Sector Index (OSX) and the S&P Composite 500 Stock Index. The comparison is for a period beginning December 31, 2002 and ending December 31, 2007. The chart assumes the investment of \$100 on December 31, 2002 and the reinvestment of all dividends.

	2002	2003	2004	2005	2006	2007
FMC TECHNOLOGIES, INC.	\$100	\$114	\$158	\$210	\$302	\$555
OSX	\$100	\$116	\$158	\$236	\$269	\$394
S&P 500	\$100	\$129	\$143	\$150	\$173	\$183

ITEM 6. SELECTED FINANCIAL DATA

The following table sets forth selected financial data derived from our audited financial statements. Audited financial statements for the years ended December 31, 2007, 2006 and 2005 and as of December 31, 2007 and 2006 are included elsewhere in this report. We have reclassified the results of operations of three business units to income (loss) from discontinued operations. The business segments affected were Energy Production Systems and FoodTech.

(In millions, except per share data)
Years ended December 31

	2007	2006	2005	2004	2003

Long-term debt, less current portion	\$ 122.1	\$ 212.6	\$ 252.6	\$ 160.4	\$ 201.1
Stockholders' equity	\$1,021.7	\$ 886.0	\$ 699.5	\$ 662.2	\$ 443.3
Years ended December 31					
	<u>2007</u>	<u>2006</u>	<u>2005</u>	<u>2004</u>	<u>2003</u>
Other financial information:					
Capital expenditures	\$ 202.5	\$ 138.1	\$ 91.1	\$ 47.3	\$ 62.1
Cash flows provided (required) by operating activities of continuing operations	\$ 578.1	\$ 155.4	\$ (58.2)	\$ 156.0	\$ 139.4
Segment operating capital employed (3)	\$1,200.0	\$1,201.4	\$ 903.9	\$ 732.4	\$ 730.5
Order backlog (4)	\$4,881.7	\$2,645.2	\$1,878.1	\$1,520.5	\$ 989.5

- (1) We reclassified net foreign exchange gains (losses) of \$(1.6) million, \$(5.0) million, \$3.1 million and \$0.9 million for the years ended December 31, 2006, 2005, 2004 and 2003, respectively, from cost of sales to other income (expense), net on the consolidated statements of income.
- (2) Net debt consists of short-term debt, long-term debt and the current portion of long-term debt less cash and cash equivalents. Net debt is a non-GAAP measure that management uses to evaluate our capital structure and financial leverage.
- (3) We view segment operating capital employed, which consists of assets, net of liabilities, as the primary measure of segment capital. Segment operating capital employed excludes corporate debt facilities and investments, pension liabilities, deferred and currently payable income taxes and LIFO inventory reserves.
- (4) Order backlog is calculated as the estimated sales value of unfilled, confirmed customer orders at the reporting date.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Cautionary Note Regarding Forward-Looking Statements

Statement under the safe harbor provisions of the Private Securities Litigation Reform Act of 1995: FMC Technologies, Inc. and its representatives may from time to time make written or oral statements that are "forward-looking" and provide information that is not historical in nature, including statements that are or will be contained in this report, the notes to our consolidated financial statements, our other filings with the Securities and Exchange Commission, our press releases and conference call presentations and our other communications to our stockholders. These statements involve known and unknown risks, uncertainties and other factors that may be outside of our control and may cause actual results to differ materially from any results, levels of activity, performance or achievements expressed or implied by any forward-looking statement. These factors include, among other things, those described under Risk Factors in Item 1A of this Annual Report on Form 10-K.

In some cases, forward-looking statements can be identified by such words or phrases as "will likely result," "is confident that," "expects," "should," "could," "may," "will continue to," "believes," "anticipates," "predicts," "forecasts," "estimates," "projects," "potential," "intends" or similar expressions identifying "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, including the negative of those words and phrases. Such forward-looking statements are based on our current views and assumptions regarding future events, future business conditions and our outlook based on currently available information. We wish to caution you not to place undue reliance on any such forward-looking statements, which speak only as of the date made and involve judgments.

Executive Overview

We design, manufacture and service sophisticated machinery and systems for customers in the energy, food processing and air transportation industries. We have manufacturing operations worldwide and are strategically located to facilitate delivery of our products and services to our customers. We operate Energy Systems (comprising Energy Production Systems and Energy Processing Systems), FoodTech and Airport Systems business segments. Our business segments serve diverse industries with a wide customer base. We focus on economic and industry-specific drivers and key risk factors affecting each of our business segments as we formulate our strategic plans and make decisions related to allocating capital and human resources. The following discussion provides examples of the kinds of economic and industry factors and key risks that we consider.

The results of our Energy Systems businesses are primarily driven by changes in exploration and production spending by oil and gas companies, which in part depend upon current and anticipated future crude oil and natural gas prices and production volumes. Our Energy Production Systems business is affected by trends in land and offshore oil and gas production, including shallow and deepwater development. Our Energy Processing Systems business results reflect spending by oilfield service companies and engineering construction companies for equipment and systems that facilitate the flow, measurement and transportation of crude oil and natural gas. The level of production activity worldwide influences spending decisions, and we use rig count as one indicator of demand. In the past year, oil and gas prices have been high relative to historical levels, creating incentives for investment in the energy industry. This trend benefited both of our Energy Systems businesses in 2007.

Our FoodTech business results reflect the level of capital investment being made by our food processing customers. The level of capital spending is influenced by changing consumer preferences, public perception of food safety, conditions in the agricultural sector that affect commodity prices, and by our customers' overall profitability. FoodTech revenues include variable rentals from equipment leases, such as citrus extractors. FoodTech results also may fluctuate as a result of consolidation of customers in the commercial food processing industry.

The results of our Airport Systems business are highly dependent upon the profitability of our customers in the airline and air cargo markets. Their profitability is affected by fluctuations in passenger and freight traffic and the volatility of operating expenses, including the impact of costs related to labor, fuel and airline security. There were positive developments in the airline industry during 2007, including growth in passenger traffic and air cargo. However, we have experienced competitive pressures, especially in the passenger boarding bridge product line, which has affected our pricing. In addition, results in our Airport Systems business are influenced by the level of purchases by the U.S. Air Force, which depend upon governmental funding approvals.

We also focus on key risk factors when determining our overall strategy and making decisions for allocating capital. These factors include risks associated with the global economic outlook, product obsolescence, and the competitive environment. We address these risks in our business strategies, which incorporate continuing development of leading edge technologies, cultivating strong customer relationships, and growing our energy business.

[Table of Contents](#)

In 2007, we again emphasized technological advancement. In Energy Production Systems, we delivered the industry's first commercial application of a full-scale subsea processing system. Subsea processing enables production and treatment of hydrocarbons on the ocean floor, thereby reducing deepwater oilfield development costs for pipelines, risers and other topside processing equipment. The installation of our system is expected to improve an oilfield's recovery by removing the water from the well stream and then reinjecting the water back into the reservoir through a separate subsea well. In FoodTech, we advanced the design in one of our freezers to manage increased throughput while maintaining the same compact size of earlier models. This should allow food processors to increase yield and speed of processing without requiring more production space.

We have developed close working relationships with our customers in all of our business segments. Our Energy Production Systems business results reflect our ability to build long-term alliances with oil and gas companies that are actively engaged in offshore deepwater development, and provide solutions to their needs in a timely and cost-effective manner. We have formed similar collaborative relationships with oilfield service companies in Energy Processing Systems, air cargo companies in Airport Systems and citrus processors in FoodTech. We believe that by working closely with our customers we enhance our competitive advantage, strengthen our market positions and improve our results.

In October 2007, we announced our decision to spin off our FoodTech and Airport Systems businesses into a separate, publicly-traded company. If the spin-off is completed, we will be able to focus all of our efforts and resources on growing the energy business. The current economic outlook in the energy sector is positive. We expect deepwater rig additions over the next few years to add new capacity to develop future subsea fields, which we expect to support the secular growth trend for subsea equipment.

As we evaluate our operating results, we view our business segments by product line and consider performance indicators like segment revenues, operating profit and capital employed, in addition to the level of inbound orders and order backlog. A significant and growing proportion of our revenues are recognized under the percentage of completion method of accounting. Our payments for such arrangements are generally received according to milestones achieved under stated contract terms. Consequently, the timing of revenue recognition is not always highly correlated with the timing of customer payments. We may structure our contracts to receive advance payments which we may use to fund engineering efforts and inventory purchases. Working capital (excluding cash) and net debt are therefore key performance indicators of cash flows.

In all of our segments, we serve customers from around the world. During 2007, approximately 70% of our total sales were to non-U.S. locations. We evaluate international markets and pursue opportunities that fit our technological capabilities and strategies. For example, we have targeted opportunities in West Africa, Brazil and the Asia Pacific region because of the expected offshore drilling potential in those regions.

CONSOLIDATED RESULTS OF OPERATIONS
YEARS ENDED DECEMBER 31, 2007, 2006 and 2005

	Year Ended December 31,			Change

* Not meaningful

2007 Compared With 2006

Our total revenue in 2007 reflects double-digit percentage growth over 2006 in all of our business segments. Energy Productions Systems generated the highest dollar increase (\$632.7 million) and the highest growth rate (28%). We entered the year with a large backlog resulting from high demand for equipment and systems in 2005 and 2006, especially subsea systems, used in the major oil and gas producing regions throughout the world. During 2007, oil and gas prices remained high relative to historical levels, and land-based drilling activity was stable, which created incentives for investment in the energy industry creating higher demand for our energy systems and services.

Gross profit (revenue less cost of sales) increased \$205.2 million, and as a percentage of sales from 20.2% in 2006 to 20.9% in 2007. Higher profits were primarily attributable to higher sales volume (\$164.8 million) and higher margin in our Energy Systems businesses, reflecting more complex subsea projects.

Selling, general and administrative ("SG&A") expense for 2007 increased compared to 2006 but declined as a percentage of sales from 10.7% in 2006 to 9.8% in 2007 as we continue to leverage our SG&A spending. The majority of our increased SG&A spending in 2007 was for Energy Production Systems staffing and selling costs.

We increased our research and development activities in 2007 as we advance new technologies pertaining to subsea processing capabilities.

Other income (expense), net, reflected non-operating gains and losses including gains on foreign currency derivative instruments, for which hedge accounting is not applied, and gains and losses on assets disposals. See Note 14 in Item 8 for further discussion of our derivative instruments' effects on the consolidated statements of income.

Net interest expense was higher in 2007, reflective of higher debt levels on average during 2007.

Our provision for income taxes reflected an effective tax rate of 33.7% in 2007. In 2006, our effective tax rate was 28.5%. The increase in the effective tax rate is primarily attributable to incremental tax expense in 2007 related to foreign earnings subject to U.S. tax and the reversal in 2006 of a \$12.2 million valuation allowance on deferred tax assets related to our Brazilian operations.

[Table of Contents](#)

Discontinued Operations

We have reported a net loss from discontinued operations reflecting operating losses in two FoodTech product lines, which were partially offset by a \$3.1 million gain on sale of one of the FoodTech product lines during the third quarter of 2007. In 2006, our net income from discontinued operations included a gain of \$34.8 million, net of tax, on the sale of our Floating Systems business. In addition, we generated profits from the Floating Systems business during 2006, including a \$15.0 million (\$9.2 million, net of tax) on the favorable resolution of claims on a large contract.

2006 Compared With 2005

Our total revenue for the year ended December 31, 2006 increased compared to the prior year, primarily as a result of our energy businesses, which generated \$631.2 million of the revenue growth. Our Energy Production Systems businesses, which provided \$479.0 million of the increase, benefited from the high demand for equipment and systems, especially subsea systems, used in the major oil and gas producing regions throughout the world. High oil and gas prices relative to historical levels continue to drive demand for our Energy Processing Systems businesses providing \$150.5 million in incremental revenue compared to 2005.

Cost of sales increased relative to 2005, but gross profit (revenue less cost of sales) increased \$162.2 million compared to 2005. Higher sales volume generated approximately 75% of the increase, particularly in our Energy Production Systems and Energy Processing Systems businesses. Gross profit improvements in all of our segments relative to 2005 drove the remaining increase in gross profits. The improvement was highly attributable to production cost reductions and shifts in product mix to higher margin products.

Selling, general and administrative expense for the year ended December 31, 2006 increased compared to the prior year, but declined as a percentage of sales from 11.4% in 2005 to 10.7% in 2006. Higher costs in our Energy Production Systems businesses were primarily responsible for the dollar increase, the result of increased headcount required for bid and proposal activity to pursue large scale subsea projects. While we have expanded our operations to meet the growing demand, we have been able to reduce expenses as a percentage of sales by leveraging our existing capabilities.

The absence of the \$25.3 million gain on disposal of our investment in common stock of MODEC, Inc. recorded in 2005 contributed to the decline in other income (expense), net for 2006.

Net interest expense for the year ended December 31, 2006 was higher compared to the same period in 2005, primarily as a result of higher average debt levels.

Income tax expense for the year ended December 31, 2006 resulted in an effective income tax rate of 28.5%, compared to an effective rate of 36.8% for 2005. The decrease in effective tax rate is attributable to \$25.5 million in incremental tax expense recorded in 2005 related to repatriating foreign earnings under the American Jobs Creation Act of 2004 (the "JOBS Act"). This effect was partially offset by the correction of an immaterial error in 2005 resulting in a reduction in income tax expense of \$5.4 million. Additionally, in 2006, we reversed a \$12.2 million valuation allowance on deferred tax assets related to our Brazilian operations. Profitability and projections for future taxable income in Brazil caused us to change our assessment of the recoverability of deferred tax assets and reverse the valuation allowance established in prior years.

Discontinued Operations

Our discontinued operations generated income of \$65.4 million for the year ended December 31, 2006, compared with \$26.1 million in losses for 2005. The variance was driven by two factors. First, we recognized income of \$15.0 million (\$9.2 million, net of tax) related to favorable resolution of contract claims for the Sonatrach project during the second quarter of 2006, compared to losses of \$54.9 million (\$33.6 million, net of tax) in 2005. Additionally, we recorded a gain of \$34.8 million, net of tax of \$18.5 million, in 2006 related to the sale of our discontinued Floating Systems business.

Outlook for 2008

We estimate that our full-year 2008 diluted earnings per share will be within the range of \$2.75 to \$2.85 including FoodTech and Airport Systems but excluding estimated costs of \$0.08 to \$0.10 associated with the planned spin-off. The section entitled "Operating Results of Business Segments" provides further discussion of our 2008 outlook. This estimate includes results of operations for FoodTech and Airport Systems, which we expect to spin off during 2008.

[Table of Contents](#)

Operating Results of Business Segments

Segment operating profit is defined as total segment revenue less segment operating expenses. The following items have been excluded in computing segment operating profit: corporate staff expense, interest income and expense associated with corporate debt facilities and investments, income taxes and other expense, net.

The following table summarizes our operating results for the years ended December 31, 2007, 2006 and 2005:

	Year Ended December 31,			Favorable/(Unfavorable)			
	2007	2006	2005	2007 vs. 2006		2006 vs. 2005	
(\$ in millions)

* Not meaningful

We report our results of operations in U.S. dollars; however, our earnings are generated in a number of currencies worldwide. We generate a significant amount of revenues, and incur a significant amount of costs, in the Euro, Norwegian Kroner, Brazilian Real, and Swedish Kroner, for example. The earnings of subsidiaries functioning in their local currencies are translated into U.S. dollars based upon the average exchange rate for the period, in order to provide worldwide consolidated results. While the U.S. dollar results reported reflect the actual economics of the period reported upon, the variances from prior periods include the impact of translating earnings at different rates.

[Table of Contents](#)

A summary of the translation impact on our consolidated results follows:

(In millions)	Year ended December 31, 2007
Revenue growth:	
Reported	\$ 859.8
Due to translation	\$ 261.2
Segment operating profit growth:	
Reported	\$ 154.0
Due to translation	\$ 22.0

The revenue impacts are primarily reflected in Energy Production Systems (80%) and FoodTech (11%). The operating profit impacts are primarily reflected in Energy Production Systems (77%) and FoodTech (16%). There was no material effect of translation on our comparative results of 2006 to 2005.

Energy Production Systems

2007 Compared With 2006

Energy Production Systems' revenue was \$632.7 million higher for the year ended December 31, 2007 compared to the same period in 2006, which includes approximately \$200 million related to foreign currency translation. Segment revenue is affected by trends in land and offshore oil and gas exploration and production. Our revenue has grown in particular from the trend toward deepwater development. During the year ended December 31, 2007, higher natural gas and crude oil prices have created an incentive for increased exploration and production of these commodities thereby driving higher demand for our products and services. Subsea systems revenue of \$2.3 billion increased by \$487.4 million in 2007 compared to the same period in 2006. Subsea volumes increased primarily as a result of progress on new and ongoing projects worldwide; notably projects located offshore West Africa, the North Sea, in the Gulf of Mexico and offshore Brazil.

Energy Production Systems segment operating profit increased by \$96.7 million in 2007 compared to the same period in 2006. The increase in sales volume accounted for \$103.5 million of the profit increase. We achieved approximately \$23.3 million in other margin improvements primarily reflective of more complex, and higher margin, subsea projects. Offsetting these profit increases were \$25.0 million in increased selling, general and administrative costs, mostly higher staff levels, and \$8.0 million in higher costs for research and development of our subsea technologies.

2006 Compared With 2005

Energy Production Systems' revenue was \$479.0 million higher in 2006 compared to 2005. Segment revenue is affected by trends in land and offshore oil and gas exploration and production, including shallow and deepwater development. Subsea systems revenue of \$1.8 billion increased by \$362.7 million in 2006 compared to 2005. Subsea volumes increased primarily as a result of progress on new and ongoing projects located offshore West Africa, the North Sea, and offshore Brazil. Surface wellhead demand has increased year-over-year, consistent with the trend of higher oil and gas prices and continued high rig activity.

Energy Production Systems generated an operating profit of \$191.2 million during 2006, an increase of \$62.7 million from the same period in 2005. This increase is driven by \$75.9 million in higher sales volumes (particularly subsea systems) and \$15.5 million in higher margins, much of which was related to revenue realized from change orders and the sale of some subsea installation equipment. These earnings were partially offset by \$30.0 million in higher selling, general and administrative costs, which did not increase as a percentage of Energy Production Systems sales.

Outlook for 2008

We expect growth in operating profit for Energy Production Systems in 2008 primarily driven by higher volumes and the execution of more complex, and higher margin, subsea projects.

[Table of Contents](#)

Energy Processing Systems

2007 Compared With 2006

Energy Processing Systems' revenue increased \$95.4 million in 2007 compared to 2006. Energy demand has continued to rise in 2007 driving higher oil and gas prices and has sustained land-based drilling and fracturing activity. This has resulted in higher demand for our fluid control products and our measurement custody transfer products and systems.

Energy Processing Systems' operating profit 2007 increased \$41.6 million compared to 2006. Higher volume drove an increase in profits of \$33.1 million. Cost reduction efforts and our ability to leverage higher sales volumes led to improved product costs in most of our business units, contributing \$9.9 million in increased profits. These savings were partially offset by higher selling, general and administrative costs including higher staff levels and increased commission expense.

2006 Compared With 2005

Energy Processing Systems' revenue increased \$150.5 million in 2006 compared to 2005. Segment revenues benefited from strong oil and gas prices as well as the continuing strength in land-based drilling and fracturing activity. These factors contributed to fluid control sales volume increasing by \$73.9 million compared to 2005, driven by higher demand for WECO®/Chiksan® equipment, which are sold primarily to service companies, along with an increased demand for pump oil and gas products. Continued progress on bulk conveying projects that were inbound in 2005 and higher demand for other material handling products contributed \$42.7 million to the increase in revenue. Sales of loading systems increased by \$20.4 million, reflecting increased demand, especially for LNG loading arms.

Energy Processing Systems' operating profit in 2006 increased \$46.8 million compared to 2005 primarily attributable to increased sales volume, contributing \$40.4 million to the annual increase in profit. Production cost reductions and improved operating efficiency contributed \$9.5 million to the increase in profitability. In the fourth quarter of 2006 we announced the closure of one of our facilities, which required an asset impairment charge of \$1.5 million and severance expense of \$2.2 million. In addition, during the fourth quarter of 2006 we settled a lawsuit and incurred \$1.7 million in expense.

Outlook for 2008

We expect an increase in operating profit for Energy Processing Systems resulting from a growth in revenue. However, we don't expect that the growth in revenues will approach 14%, as achieved in 2007.

FoodTech

2007 Compared With 2006

FoodTech's revenue increased by \$94.7 million in the twelve months ended December 31, 2007 compared with the same period in 2006. Demand from the poultry industry was lower than in 2006 primarily as a result of a slowdown in the North American poultry market; however, we have been able to replace lost revenue in this industry with increases in other food processing markets worldwide. These sales, primarily freezing equipment, accounted for \$27.3 million in incremental revenue. Increased demand for food processing equipment compared to a much lower market demand worldwide in 2006 drove \$32.5 million in incremental revenue. Additionally, foreign currency translation caused \$29.6 million of the increase in revenue.

FoodTech's operating profit in the twelve months ended December 31, 2007 increased by \$9.8 million as compared to the same period in 2006. Higher sales volume contributed \$25.7 million in higher profits which were partially offset by \$8.5 million from margin declines resulting from a change in sales mix. In 2006, our sales mix was more heavily weighted toward the poultry industry, to which we generally sell our higher-technology-based core product line. In 2007, we compensated for decreased volume in the North American poultry industry with a higher volume of lower-margin equipment to non-poultry customers. In addition, selling, general and administrative costs increased \$4.8 million in 2007 compared to 2006, most of which represents foreign currency translation.

2006 Compared With 2005

FoodTech's revenue during 2006 was essentially flat compared to 2005. Higher volumes primarily from poultry processing demand provided \$5.7 million in incremental revenue which were offset by decreases in revenue from food processing equipment, especially in the tomato and fruit processing markets.

[Table of Contents](#)

FoodTech's operating profit increased by \$6.2 million during 2006 compared to 2005. The increase in operating profit resulted from delivering a more favorable mix of products and services primarily in our cooking and freezing businesses. In addition, we realized a gain of \$1.0 million on a sale of property in 2006.

Outlook for 2008

We anticipate some recovery in poultry demand in the U.S. which supports our expectations for increased revenue and operating profit in 2008.

Airport Systems

2007 Compared With 2006

Airport Systems' revenue was \$39.7 million higher for the year ended December 31, 2007 compared with the same period in 2006. Air traffic has trended upward as compared to 2006, creating higher demand for airline ground support equipment (\$23.3 million) as well as airport maintenance and facility operation services (\$9.5 million) which includes new service contracts as well as increased scope on existing contracts.

Airport Systems' operating profit for the year ended December 31, 2007 improved \$5.9 million compared with the same period in 2006, reflecting two factors of approximately equal magnitude: higher volume and better leveraging of our SG&A spending.

2006 Compared With 2005

Airport Systems' revenue was \$16.7 million higher during 2006 compared with 2005. The revenue improvement was driven by higher demand for passenger boarding bridges primarily from domestic and international airport authorities and the addition of new maintenance contracts at various domestic airports in our airport services business.

Airport Systems' operating profit increased in 2006 by \$2.1 million compared to 2005. Increased profits were driven by lower startup costs for a ground support equipment product line recently integrated into the business, which provided \$2.7 million in incremental profit, and \$1.7 million higher profits from airport services. The absence of a \$2.7 million gain recorded in 2005 on a land sale partially offset our net increase in profits.

Outlook for 2008

We experienced record high inbound orders and ended the year with a record high backlog which will support growth in revenue and in operating profit in 2008.

Corporate Items

2007 Compared With 2006

Our corporate items reduced earnings by \$54.3 million in 2007 compared to \$69.3 million in 2006. Our comparative results reflect \$28.2 million in increased gains from foreign currency hedging activity. Partially offsetting these earnings were higher stock-based compensation of \$5.0 million and other corporate staff costs of \$2.7 million.

2006 Compared With 2005

Corporate items increased by \$31.9 million in 2006 compared to the prior year, primarily as a result of the absence of a \$25.3 million gain on sale of MODEC, Inc. shares recognized in 2005. Additionally, share based compensation expense increased by \$4.4 million over the prior year reflecting the amortization of higher value awards granted in the past several years.

[Table of Contents](#)**Inbound Orders and Order Backlog**

Inbound orders represent the estimated sales value of confirmed customer orders received during the reporting period.

	Inbound orders Year Ended December 31,	
	2007	2006
(In millions)		
Energy Production Systems	\$ 5,017.0	\$ 2,827.9
Energy Processing Systems	792.2	763.5
Intercompany eliminations	(3.3)	(1.2)
Subtotal Energy Systems	5,805.9	3,590.2
FoodTech	596.8	537.0
Airport Systems	457.6	403.0
Intercompany eliminations	(8.5)	(7.4)
Total inbound orders	\$ 6,851.8	\$ 4,522.8

Order backlog is calculated as the estimated sales value of unfulfilled, confirmed customer orders at the reporting date.

	Order backlog December 31,	
	2007	2006
(In millions)		
Energy Production Systems	\$4,162.5	\$2,027.7
Energy Processing Systems	330.5	306.0
Intercompany eliminations	(1.1)	(0.2)
Subtotal Energy Systems	4,491.9	2,333.5
FoodTech	164.3	160.5
Airport Systems	226.7	152.7
Intercompany eliminations	(1.2)	(1.5)
Total order backlog	\$4,881.7	\$2,645.2

Energy Productions Systems' order backlog at December 31, 2007 increased by \$2.1 billion since year-end 2006 reflecting higher significant subsea project orders, including StatoilHydro Ormen Lange Phase II, Vega and Troll O2, Woodside Pluto, Shell Perdido and Gumusut, and Petrobras Cascade projects. We also received an order in December 2007 from Total for their Pazflor project valued at \$980 million. The record high backlog of \$4.2 billion at December 31, 2007 includes the same projects mentioned above plus Petrobras Mexilhao in Brazil, which was also included in backlog at December 31, 2006. We expect to convert approximately 50% of the December 31, 2007 backlog into revenue during 2008.

Energy Processing Systems' order backlog at December 31, 2007 increased by \$24.5 million since December 31, 2006, primarily reflecting higher demand for measurement solutions. We expect to convert approximately 85% of the December 31, 2007 backlog into revenue during 2008.

FoodTech's order backlog at December 31, 2007 has been relatively stable compared to December 31, 2006 reflecting 11% growth in inbound and 19% growth in sales. We expect to convert the entire FoodTech backlog at December 31, 2007 into revenue during 2008.

Airport Systems' order backlog at December 31, 2007 has increased by \$74.0 million compared with December 31, 2006 backlog. An increase in demand for loaders, especially internationally, drives the increase in backlog. Additionally, new government contracts for trailers and ancillary aircraft equipment reside in backlog in 2007. We expect to convert approximately 90% of the Airport Systems backlog at December 31, 2007 into revenue during 2008.

[Table of Contents](#)

Liquidity and Capital Resources

We generate our capital resources primarily through operations and, when needed, through various credit facilities.

Our net debt at December 31, 2007 was \$0.2 million, compared with net debt of (\$138.9) million at December 31, 2006. Net debt is a non-GAAP measure reflecting debt, net of cash and cash equivalents. Management uses this non-GAAP measure to evaluate our capital structure and financial leverage. We believe it is a meaningful measure which will assist investors in understanding our results and recognizing underlying trends. This measure supplements disclosures required by GAAP. The following table provides details of the balance sheet classifications included in net debt.

	December 31, 2007	December 31, 2006
(In millions)		
Cash and cash equivalents	\$ 129.5	\$ 79.5
Short-term debt and current portion of long-term debt	(7.2)	(5.8)
Long-term debt, less current portion	(112.2)	(212.6)
Related party note payable	(9.9)	—
Net debt	\$ 0.2	\$ (138.9)

Our net debt decreased during 2007 primarily as a result of cash generated from operations, which more than offset the repurchases of our common stock and the funding for capacity expansion, particularly in our Energy Production Systems segment.

Cash flows for each of the years in the three-year period ended December 31, 2007, were as follows:

	Year Ended December 31,		
	2007	2006	2005
(In millions)			
Cash provided (required) by operating activities of continuing operations	\$ 578.1	\$ 155.4	\$(58.2)
Cash required by investing activities of continuing operations	(200.8)	(141.8)	(0.7)
Cash provided (required) by financing activities	(346.9)	(136.8)	54.6
Cash provided by discontinued operations	4.8	47.0	37.3
Effect of exchange rate changes on cash and cash equivalents	14.8	2.8	(4.2)
Increase (decrease) in cash and cash equivalents	\$ 50.0	\$ (73.4)	\$ 28.8

Operating Cash Flows

During the year ended December 31, 2007, we generated \$578.1 million in cash flows from operating activities of continuing operations, which represented a \$422.7 million increase compared to the prior year. Improvements in utilization of working capital generated the majority of the increase. Cash outflows for working capital in 2006 were approximately \$160 million compared to a net cash inflow of approximately \$190 million in 2007. Cash receipts for accounts receivable collection and advance payments on long-term projects, especially in the Energy Production segment during the second half of the year, drove the net cash inflow. Our working capital balances can vary significantly quarter to quarter depending on the payment terms and timing of delivery on key contracts. The increase in cash flows is also attributable to higher earnings. Income from continuing operations, net of adjustments for non-cash items, was \$444.6 million for 2007, which was \$63.7 million greater than the comparable figure for the prior year. Our cash flows from operating activities in 2006 were \$213.6 million higher than the prior year. The increase is primarily attributable to a \$170.1 million increase in income from continuing operations, net of adjustments for non-cash items.

Investing Cash Flows

Our cash requirements for investing activities of continuing operations in the year ended December 31, 2007 increased by \$59.0 million compared to 2006. Capital expenditures increased by \$64.4 million in 2007 primarily as a result of capacity expansion and light well intervention projects in our Energy Systems businesses. Additionally, we spent \$64.4 million on acquisitions during 2007, including the \$59.7 million purchase of minority interest in CDS Engineering BV ("CDS"), compared to \$9.5 million on acquisitions during 2006. The higher investments were partially offset by the increase in proceeds from asset disposals. In 2007, we received \$66.1 million in proceeds from the sale of assets, including \$58.1 million from the sale and leaseback of land and property in Houston, Texas.

Table of Contents

Cash required by investing activities in 2006 was \$141.8 million primarily reflecting ongoing investment in new production facilities worldwide, primarily associated with increasing subsea and surface wellhead capacity. In 2005 our capital expenditures of \$91.1 million were offset by \$74.4 million in proceeds from the disposal of our investment in the common stock of MODEC, Inc.

Financing Cash Flows

Cash required by financing activities was \$346.9 million for the year ended December 31, 2007 which increased from \$136.8 million for the same period in 2006. We repurchased 7.9 million of our outstanding common stock for \$287.4 million under our 30 million share repurchase authorization, an increase of \$144.9 million in repurchases from 2006. Additionally, we reduced our net borrowings by \$98.4 million during 2007, with funding from operating cash flows, compared to \$38.1 million repaid during 2006. In 2005, cash provided by financing activities was primarily from long-term borrowings, which funded \$63.9 million in common stock repurchases.

Discontinued Operations Cash Flows

Cash flows provided by discontinued operations in 2007 primarily reflects the proceeds on the sale of a FoodTech unit during the third quarter of 2007. The proceeds of \$8.0 million were partially offset by cash requirements for operating activities of the two FoodTech units included in discontinued operations for 2007. Cash provided in 2006 primarily reflected proceeds on the sale of Floating Systems during December 2006. Cash provided in 2005 reflected timing of customer receivables collected from a significant completed contract as well as proceeds of \$9.8 million from the sale of our investment in the GTL Microsystems joint venture.

Debt and Liquidity

Total borrowings at December 31, 2007 and 2006, comprised the following:

	December 31,	
	2007	2006
(In millions)		
Revolving credit facilities	\$ —	\$203.0
Commercial paper	103.0	—
Related party note payable	9.9	—
Uncommitted credit facilities	6.8	5.3
Property financing	8.9	9.3
Other	0.7	0.8
Total borrowings	\$129.3	\$218.4

The following is a summary of our credit facilities at December 31, 2007:

(In millions) Description	Commitment amount	Debt outstanding	Commercial paper outstanding	Letters of credit	Unused capacity	Maturity
			(a)	(b)		
Five-year revolving credit facility	\$ 600.0	\$ —	\$ 103.0	\$19.6	\$477.4	December 2012
One-year revolving credit facility	5.0	—	—	—	5.0	December 2008
	\$ 605.0	\$ —	\$ 103.0	\$19.6	\$482.4	

- (a) Under our commercial paper program, we have the ability to access up to \$400 million of short-term financing through our commercial paper dealers. Our available capacity under our \$600 million five-year revolving credit facility is reduced by any outstanding commercial paper.
- (b) The \$600 million five-year revolving credit facility allows us to obtain a total of \$150.0 million in standby letters of credit. Our available capacity is reduced by any outstanding letters of credit associated with this facility.

Committed credit available under our five-year revolving credit facility provided the ability to refinance our commercial paper obligations on a long-term basis. Therefore, at December 31, 2007, as we have both the ability and intent to refinance these obligations on a long-term basis, our commercial paper borrowings were classified as long-term on the consolidated balance sheet.

Table of Contents

In December 2007, we entered into a \$600 million five-year revolving credit agreement maturing in December 2012 with JPMorgan Chase Bank, N.A., as Administrative Agent. Borrowings under the credit agreement accrue interest at a rate equal to, at our option; either (a) a base rate determined by reference to the higher of (1) the agent's prime rate and (2) the federal funds rate plus 1/2 of 1% or (b) an interest rate of 31 basis points above the London Interbank Offered Rate ("LIBOR"). The margin over LIBOR is variable and is determined based on our debt rating. Among other restrictions, the terms of the credit agreement include negative covenants related to liens and a financial covenant related to the debt to earnings ratio. We are in compliance with all restrictive covenants as of December 31, 2007.

Outlook for 2008

We plan to meet our cash requirements in 2008 with cash generated from operations. We are projecting to spend \$150 million during 2008 for capital expenditures, including continued expansion in our Energy Systems operating facilities and our light well intervention capabilities. We anticipate contributing approximately \$50 million to our pension plans in 2008. Further, we expect to continue our stock repurchases authorized by our Board, with the timing and amounts of these repurchases dependent upon market conditions.

We have committed credit facilities totaling \$605 million which we expect to utilize if working capital temporarily increases in response to market demand, and when opportunities for business acquisitions or mergers meet our standards. We continue to evaluate acquisitions, divestitures and joint ventures in the ordinary course of business.

Contractual Obligations and Off-Balance Sheet Arrangements

The following is a summary of our contractual obligations at December 31, 2007:

(In millions)	Payments due by period				
	Total payments	Less than 1 year	1-3 years	3-5 years	After 5 years
Contractual obligations					
Long-term debt (a)	\$ 112.6	\$ 0.4	\$ 0.9	\$104.2	\$ 7.1
Short-term debt	6.8	6.8	—	—	—
Operating leases	411.2	48.6	90.7	86.2	185.7
Unconditional purchase obligations (b)	735.0	667.7	66.0	1.3	—
Pension and other postretirement benefits (c)	50.0	50.0	—	—	—
Acquisition-related obligations (d)	9.9	—	4.4	5.5	—
Unrecognized tax benefits (e)	8.9	8.9	—	—	—
Total contractual obligations	\$1,334.4	\$ 782.4	\$162.0	\$197.2	\$192.8

- (a) Our available long-term debt is dependent upon our compliance with covenants, including negative covenants related to liens, and a financial covenant related to the debt to earnings ratio. Any violation of covenants or other events of default, which are not waived or cured, or changes in our credit rating could have a material impact on our ability to maintain our committed financing arrangements.

Interest on long-term debt is not included in the table. As of December 31, 2007, we have commercial paper borrowings with short-term maturities that we expect to refinance beyond 2008. However, we are uncertain as to the level of commercial paper or other borrowings and market interest rates that will be applicable throughout 2008. During 2007, we paid \$17.5 million for interest.

- (b) In the normal course of business, we enter into agreements with our suppliers to purchase raw materials or services. These agreements include a requirement that our supplier provide products or services to our specifications and require us to make a firm purchase commitment to our supplier. As substantially all of these commitments are associated with purchases made to fulfill our customers' orders, the costs associated with these agreements will ultimately be reflected in cost of sales on our consolidated statements of income.
- (c) We expect to make \$50.0 million in contributions to our pension and other postretirement benefit plans during 2008. This amount includes discretionary contributions to our U.S. qualified pension plan. Required contributions for future years depend on factors that cannot be determined at this time.
- (d) Acquisition-related obligations reflect a note payable to a member of CDS management issued in connection with the purchase of a minority interest in 2007. Additionally, we have an unrecognized commitment to provide consideration in 2011 contingent upon earnings and continued employment. We are currently unable to estimate the payment, if any, that would be made in 2011.

[Table of Contents](#)

- (e) As of December 31, 2007, we have a liability for unrecognized tax benefits of \$20.3 million. Of this amount, we expect to make payments of \$8.9 million during 2008 to settle a portion of these liabilities, and this amount is reflected in income taxes payable in our consolidated balance sheet as of December 31, 2007. Due to the high degree of uncertainty regarding the timing of potential future cash flows associated with the remaining \$11.4 million in liabilities, we are unable to make a reasonable estimate of the period in which such liabilities might be paid.

The following is a summary of other off-balance sheet arrangements at December 31, 2007:

(In millions) Other off-balance sheet arrangements	Amount of commitment expiration per period				
	Total amount	Less than 1 year	1 - 3 years	3 - 5 years	After 5 years
Letters of credit and bank guarantees	\$519.2	\$ 166.5	\$245.0	\$ 97.8	\$ 9.9
Surety bonds	175.1	122.1	40.6	12.4	—
Total other off-balance sheet arrangements	\$694.3	\$ 288.6	\$285.6	\$110.2	\$ 9.9

As collateral for our performance on certain sales contracts or as part of our agreements with insurance companies, we are contingently liable under letters of credit, surety bonds and other bank guarantees. In order to obtain these financial instruments, we pay fees to various financial institutions in amounts competitively determined in the marketplace. Our ability to generate revenue from certain contracts is dependent upon our ability to obtain these off-balance sheet financial instruments. These off-balance sheet financial instruments may be renewed, revised or released based on changes in the underlying commitment. Historically, our commercial commitments have not been drawn upon to a material extent; consequently, management believes it is not likely that there will be claims against these commitments that will have a negative impact on our key financial ratios or our ability to obtain financing.

Qualitative and Quantitative Disclosures about Market Risk

We are subject to financial market risks, including fluctuations in foreign currency exchange rates and interest rates. In order to manage and mitigate our exposure to these risks, we may use derivative financial instruments in accordance with established policies and procedures. We do not use derivative financial instruments where the objective is to generate profits solely from trading activities. At December 31, 2007 and 2006, our derivative holdings consisted of foreign currency forward contracts, foreign currency instruments embedded in purchase and sale contracts, and interest rate swap agreements.

These forward-looking disclosures only address potential impacts from market risks as they affect our financial instruments. They do not include other potential effects which could impact our business as a result of changes in foreign currency exchange rates, interest rates, commodity prices or equity prices.

Foreign Currency Exchange Rate Risk

When we sell or purchase products or services, transactions are frequently denominated in currencies other than an operation's functional currency. When foreign currency exposures exist we may enter into foreign exchange forward instruments with third parties. Our hedging policy reduces, but does not entirely eliminate, the impact of foreign currency exchange rate movements. We expect any gains or losses in the hedging portfolio to be substantially offset by a corresponding gain or loss in the underlying exposure being hedged.

We hedge our net recognized foreign currency assets and liabilities to reduce the risk that our earnings and cash flows will be adversely affected by fluctuations in foreign currency exchange rates. We also hedge firmly committed anticipated transactions in the normal course of business. The majority of these hedging instruments mature during 2008.

In certain circumstances we enter into purchase and sales contracts which contain payment terms in foreign currencies. This may occur, for instance, to offset the cost of equipment or services payable in the same currency. Contractual payments required in a currency that is not the functional or local currency of substantial parties to the contract are embedded derivatives.

We use a sensitivity analysis to measure the impact on derivative instrument fair values of an immediate 10% adverse movement in the foreign currency exchange rates. This calculation assumes that each exchange rate would change in the same direction relative to the U.S. dollar and all other variables are held constant. We expect that changes in the fair value of derivative instruments will offset the changes in fair value of the underlying assets and liabilities on the balance sheet. To the extent that our derivative instruments are hedging anticipated transactions, a 10% decrease in the value of the hedged currency would result in a decrease of approximately \$40 million in the net fair value of derivative financial instruments reflected on our balance sheet at December 31, 2007. Changes in the derivative fair value will not have an immediate impact on our results of operations unless these contracts are deemed to be ineffective.

[Table of Contents](#)

Interest Rate Risk

Our debt instruments subject us to market risk associated with movements in interest rates. We had \$103.0 million in variable rate debt outstanding at December 31, 2007, upon which interest expense is subject to the movement in LIBOR. A 10% adverse movement in the interest rate, or 50 basis points, would result in an increase to interest expense of \$0.5 million.

At December 31, 2007, we had three floating-to-fixed interest rate swaps which we used to hedge \$150 million of variable rate debt. We terminated the swaps in January 2008 with no material impact on earnings.

We assess effectiveness of forward foreign currency contracts designated as cash flow hedges based on changes in fair value attributable to changes in spot rates. We exclude the impact attributable to changes in the difference between the spot rate and the forward rate for the assessment of hedge effectiveness, and recognize the change in fair value of this component immediately in earnings. The difference between the spot rate and the forward rate is generally related to the differences in the interest rates of the countries of the currencies being traded. Consequently, we have exposure to relative changes in interest rates between countries in our results of operations. To the extent the U.S. interest rate decreases by 10%, or 50 basis points, and other countries interest rates remain fixed, we would expect to recognize a decrease of \$2.6 million in earnings in the period of change. However, if the foreign currency forward contracts are held to maturity we can expect to recognize increased earnings of \$2.6 million over the remaining lives of the contracts. Based on our portfolio as of December 31, 2007, we believe we have exposure to the interest rates in the U.S., Brazil, United Kingdom, the European Community, and Norway.

Critical Accounting Estimates

We prepare our consolidated financial statements in conformity with United States generally accepted accounting principles. As such, we are required to make certain estimates, judgments and assumptions about matters that are inherently uncertain. On an ongoing basis, our management re-evaluates these estimates, judgments and assumptions for reasonableness because of the critical impact that these factors have on the reported amounts of assets and liabilities at the dates of the financial statements and the reported amounts of revenues and expenses during the periods presented. Management has discussed the development and selection of these critical accounting estimates with the Audit Committee of our Board of Directors and the Audit Committee has reviewed this disclosure. We believe that the following are the critical accounting estimates used in preparing our financial statements.

Percentage of Completion Method of Accounting

We record revenue on construction-type manufacturing projects using the percentage of completion method, where revenue is recorded as work progresses on each contract. There are several acceptable methods of measuring progress toward completion. Most frequently, we use the ratio of costs incurred to date to total estimated contract costs at completion to measure this progress; however, there are also types of contracts where we consistently apply the ratio of units delivered to date—or units of work performed—as a percentage of total units because we have determined that these methods provide a more accurate measure of progress toward completion.

We execute contracts with our customers that clearly describe the equipment, systems and/or services that we will provide and the amount of consideration we will receive. After analyzing the drawings and specifications of the contract requirements, our project engineers estimate total contract costs based on their experience with similar projects and then adjust these estimates for specific risks associated with each project, such as technical risks associated with a new design. Costs associated with specific risks are estimated by assessing the probability that conditions will arise that will affect our total cost to complete the project. After work on a project begins, assumptions that form the basis for our calculation of total project cost are examined on a monthly basis and our estimates are updated to reflect new information as it becomes available.

Revenue recorded using the percentage of completion method amounted to \$2,018.8 million, \$1,665.9 million and \$1,274.6 million for the years ended December 31, 2007, 2006, and 2005, respectively.

A significant portion of our total revenue recorded under the percentage of completion method relates to the Energy Production Systems business segment, primarily for subsea petroleum exploration equipment projects that involve the design, engineering, manufacturing and assembly of complex, customer-specific systems. The systems are not entirely built from standard bills of material and typically require extended periods of time to design and construct.

[Table of Contents](#)

Total estimated contract cost affects both the revenue recognized in a period as well as the reported profit or loss on a project. The determination of profit or loss on a contract requires consideration of contract revenue, change orders and claims, less costs incurred to date and estimated costs to complete. Anticipated losses on contracts are recorded in full in the period in which they are identified. Profits are recorded based on the estimated project profit multiplied by the percentage complete.

The total estimated contract cost in percentage of completion accounting is a critical accounting estimate because it can materially affect revenue and cost of sales, and it requires us to make judgments about matters that are uncertain. There are many factors, including but not limited to resource price inflation, labor availability, productivity and weather that can affect the accuracy of our cost estimates and ultimately our future profitability. In the past, we have realized both lower and higher than expected margins and have incurred losses as a result of unforeseen changes in our project costs.

The amount of revenue recognized using the percentage of completion method is sensitive to our changes in estimates of total contract costs. If we had used a different estimate of total contract costs for each contract in progress at December 31, 2007, a 1% increase or decrease in the estimated margin earned on each contract would have increased or decreased total revenue and pre-tax income for the year ended December 31, 2007 by \$20 million.

Inventory Valuation

Inventory is recorded at the lower of cost or net realizable value. In order to determine net realizable value, we evaluate each component of inventory on a regular basis to determine whether it is excess or obsolete. We record the decline in the carrying value of estimated excess or obsolete inventory as a reduction of inventory and as an expense included in cost of sales in the period in which it is identified. Our estimate of excess and obsolete inventory is a critical accounting estimate because it is highly susceptible to change from period to period. In addition, it requires management to make judgments about the future demand for inventory.

In order to quantify excess or obsolete inventory, we begin by preparing a candidate listing of the components of inventory that have a quantity on hand in excess of usage within the most recent two-year period. This list is then reviewed with sales, engineering, production and materials management personnel to determine whether this list of potential excess or obsolete inventory items is accurate. Management considers as part of this evaluation whether there has been a change in the market for finished goods, whether there will be future demand for on-hand inventory items and whether there are components of inventory that incorporate obsolete technology. As a result, our estimate of excess or obsolete inventory is sensitive to changes in assumptions about future usage of the inventory.

Accounting for Income Taxes

In determining our current income tax provision, we assess temporary differences resulting from differing treatments of items for tax and accounting purposes. These differences result in deferred tax assets and liabilities, which are recorded in our consolidated balance sheets. When we maintain deferred tax assets, we must assess the likelihood that these assets will be recovered through adjustments to future taxable income. To the extent we believe recovery is not likely, we establish a valuation allowance. We record an allowance reducing the asset to a value we believe will be recoverable based on our expectation of future taxable income. We believe the accounting estimate related to the valuation allowance is a critical accounting estimate because it is highly susceptible to change from period to period as it requires management to make assumptions about our future income over the lives of the deferred tax assets, and the impact of increasing or decreasing the valuation allowance is potentially material to our results of operations.

Forecasting future income requires us to use a significant amount of judgment. In estimating future income, we use our internal operating budgets and long-range planning projections. We develop our budgets and long-range projections based on recent results, trends, economic and industry forecasts influencing our segments' performance, our backlog, planned timing of new product launches, and customer sales commitments. Significant changes in the expected realizability of the deferred tax asset would require that we adjust the valuation allowance applied against the gross value of our total deferred tax assets, resulting in a change to net income.

As of December 31, 2007, we estimated that it is not likely that we will generate future taxable income in certain foreign jurisdictions in which we have cumulative net operating losses and, therefore, we have provided a valuation allowance against the related deferred tax assets. As of December 31, 2007, we estimated that it is more likely than not that we will have future taxable income in the United States to utilize our domestic deferred tax assets. Therefore, we have not provided a valuation allowance against any domestic deferred tax assets.

[Table of Contents](#)

The need for a valuation allowance is sensitive to changes in our estimate of future taxable income. If our estimate of future taxable income was 15% lower than the estimate used, we would still generate sufficient taxable income to utilize such domestic deferred tax assets.

Retirement Benefits

We provide most of our employees with certain retirement (pension) and postretirement (health care and life insurance) benefits. In order to measure the expense and obligations associated with these retirement benefits, management must make a variety of estimates, including discount rates used to value certain liabilities, expected return on plan assets set aside to fund these costs, rate of compensation increase, employee turnover rates, retirement rates, mortality rates and other factors. We update these estimates on an annual basis or more frequently upon the occurrence of significant events. These accounting estimates bear the risk of change due to the uncertainty associated with the estimate as well as the fact that these estimates are difficult to measure. Different estimates used by management could result in our recognizing different amounts of expense over different periods of time.

We use third-party specialists to assist management in evaluating our assumptions as well as appropriately measuring the costs and obligations associated with these retirement benefits. The discount rate and expected return on plan assets are based primarily on investment yields available and the historical performance of our plan assets. They are critical accounting estimates because they are subject to management's judgment and can materially affect net income.

Pension expense was \$34.5 million, \$31.5 million and \$23.7 million for the years ended December 31, 2007, 2006 and 2005, respectively.

The discount rate used affects the interest cost component of net periodic pension cost. The discount rate is based on rates at which the pension benefit obligation could effectively be settled on a present value basis. To determine the weighted average discount rate, we review long-term, high quality corporate bonds at our determination date and use a model that matches the projected benefit payments for our plans to coupons and maturities from high quality bonds. Significant changes in the discount rate, such as those caused by changes in the yield curve, the mix of bonds available in the market, the duration of selected bonds, and the timing of expected benefit payments may result in volatility in pension expense and pension liabilities. We increased the discount rate for our domestic and certain of our international plans during 2006 and 2007. The weighted average discount rate used to compute net periodic benefit cost increased from 5.5% to 5.6% in 2007.

Our pension expense is sensitive to changes in our estimate of discount rate. Holding other assumptions constant, for a 50 basis point reduction in the discount rate, annual pension expense would increase by approximately \$7.7 million before taxes. Holding other assumptions constant, for a 50 basis point increase in the discount rate, annual pension expense would decrease by approximately \$7.7 million before taxes.

Net periodic pension cost includes an underlying expected long-term rate of asset return. Our estimate of the expected rate of return on plan assets is based primarily on the historical performance of plan assets, current market conditions, our asset allocation and long-term growth expectations. Our actual annualized returns on plan assets on trailing 5-year and trailing 10-year periods have exceeded the 2007 estimated long-term rate of return of 8.5%. Our actual returns, after fees, on plan assets were 4.3% and 13.2% in 2007 and 2006, respectively. The expected return on plan assets is recognized as part of the net periodic pension cost. The difference between the expected return and the actual return on plan assets is amortized over the expected remaining service life of employees, so there is a lag time between the market's performance and its impact on plan results. Holding other assumptions constant, an increase or decrease of 50 basis points in the expected rate of return on plan assets would decrease or increase annual pension expense by approximately \$3.8 million before taxes.

Impact of Recently Issued Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board ("FASB") issued Statement of Financial Accounting Standards ("SFAS") No. 157, "Fair Value Measurements," which defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. SFAS No. 157 is effective in fiscal years beginning after November 15, 2007. Delayed application is permitted for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until fiscal years beginning after November 15, 2008. We adopted SFAS No. 157 on January 1, 2008 for financial assets and financial liabilities and have chosen to delay the adoption for nonfinancial assets and nonfinancial liabilities until January 1, 2009. We do not believe that the adoption of this pronouncement will have a material effect on our results of operations or financial position.

In February 2007, the FASB issued SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities." SFAS No. 159 permits entities to choose to measure certain financial instruments and other items at fair value. Under SFAS No. 159, the decision to measure items at fair value is made at specified election dates on an irrevocable instrument-by-instrument basis. This statement is effective for financial statements issued for fiscal years beginning after November 15,

[Table of Contents](#)

2007. We do not expect to elect this option of measurement on any of our financial instruments, and therefore, we do not believe the adoption of SFAS No. 159 on January 1, 2008 will have a significant impact on our financial position, results of operations or cash flows.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), "Business Combinations," replacing SFAS No. 141. SFAS No. 141R changes or clarifies the acquisition method of accounting for acquired contingencies, transaction costs, step acquisitions, restructuring costs and other major areas affecting how the acquirer recognizes and measures the assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree. In addition, this pronouncement amends previous interpretations of intangible asset accounting by requiring the capitalization of in-process research and development and proscribing impacts to current income tax expense (rather than a reduction to goodwill) for changes in deferred tax benefits related to a business combination. SFAS No. 141R will be applied prospectively for business combinations occurring after December 31, 2008.

In December 2007, the FASB issued SFAS No. 160, "Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51." SFAS No. 160 will standardize the accounting for and reporting of minority interests in the financial statements, which will be presented as noncontrolling interests and classified as a component of equity. In addition, statements of operations will report consolidated net income before an allocation to both the parent and the noncontrolling interest. This new presentation will have an impact on the basic financial statements as well as the disclosures to clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling interests. SFAS No. 160 is effective for fiscal years beginning after December 15, 2008. We have not yet determined the impact, if any, that the adoption of SFAS No. 160 will have on our results of operations or financial position.

ITEM 7A. QUALITATIVE AND QUANTITATIVE DISCLOSURES ABOUT MARKET RISK

Information regarding market risks is incorporated herein by reference from the section entitled "Qualitative and Quantitative Disclosures about Market Risk" in Item 7 of this Annual Report on Form 10-K.

**FMC TECHNOLOGIES, INC. AND CONSOLIDATED SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

NOTE 1. BASIS OF PRESENTATION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of presentation—FMC Technologies, Inc. and consolidated subsidiaries (“FMC Technologies” or “we”) designs, manufactures and services sophisticated machinery and systems for our customers through our business segments: Energy Systems (comprising Energy Production Systems and Energy Processing Systems), FoodTech and Airport Systems. Our consolidated financial statements have been prepared in United States dollars and in accordance with United States generally accepted accounting principles (“GAAP”).

On July 18, 2007, we announced that our Board of Directors approved a two-for-one stock split in the form of a stock dividend payable on August 31, 2007 to shareholders of record as of August 17, 2007. At August 31, 2007, an adjustment was made to reclassify an amount from capital in excess of par value to common stock to account for the par value of the common stock issued as a stock dividend. This adjustment had no overall effect on equity. We have revised the historical common share and per common share information in this report to reflect the effects of the stock split.

On October 29, 2007, we announced our intention to separate into two independent publicly-traded companies through the spin-off and distribution of 100% of our FoodTech and Airport Systems businesses to our shareholders. The transaction, expected to be tax-free to shareholders, is expected to enable the two public companies to better focus on their distinct customer bases, business strategies and operational needs. Consummation of the proposed separation is subject to certain conditions, including final receipt of a ruling from the Internal Revenue Service (IRS) with respect to the tax-free status of the spin-off, the absence of any material changes or developments, and the effectiveness of registration statements with the Securities and Exchange Commission. The separation, expected to occur in mid-2008, will not require a vote by FMC Technologies shareholders.

Use of estimates—The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates. We base our estimates on historical experience and on other assumptions that we believe to be relevant under the circumstances. In particular, judgment is used in areas such as revenue recognition using the percentage of completion method of accounting, making estimates associated with the valuation of inventory and income tax assets, and accounting for retirement benefits and contingencies.

Principles of consolidation—The consolidated financial statements include the accounts of FMC Technologies and its majority-owned subsidiaries and affiliates. Intercompany accounts and transactions are eliminated in consolidation.

Reclassifications—Certain prior-year amounts have been reclassified to conform to the current year’s presentation. We reclassified net foreign exchange losses of \$1.6 million and \$5.0 million for the years ended December 31, 2006 and 2005, respectively, from cost of sales to other income (expense), net on the consolidated statements of income. In the consolidated statements of cash flows, we reclassified \$7.4 million and (\$3.0) million from advance payments and progress billings to other assets and liabilities, net within operating activities for the years ended December 31, 2006 and 2005, respectively. This reclassification had no impact on total cash flows from operating activities for any of the periods presented.

Revenue recognition—Revenue from equipment sales is recognized either upon transfer of title to the customer (which is upon shipment or when customer-specific acceptance requirements are met) or under the percentage of completion method. Service revenue is recognized as the service is provided. For multiple-element revenue arrangements, such as the sale of equipment with a service agreement, we allocate the contract value to the various elements based on objective evidence of fair value for each element and recognize revenue consistent with the nature of each deliverable. We record our sales net of any value added, sales or use tax.

The percentage of completion method of accounting is used for construction-type manufacturing and assembly projects that involve significant design and engineering effort in order to satisfy detailed customer-supplied specifications. Under the percentage of completion method, revenue is recognized as work progresses on each contract. We primarily apply the ratio of costs incurred to date to total estimated contract costs at completion to measure this ratio; however, there are certain types of contracts where we consistently apply the ratio of units delivered to date—or units of work performed—as a percentage of total units, because it has been determined that these methods provide a more accurate measure of progress toward completion. If it is not possible to form a reliable estimate of progress toward completion, no revenues or costs are recognized until the project is complete or substantially complete. Any expected losses on construction-type contracts in progress are charged to earnings, in total, in the period the losses are identified.

Modifications to construction-type contracts, referred to as “change orders,” effectively change the provisions of the original contract, and may, for example, alter the specifications or design, method or manner of performance, equipment, materials,

[Table of Contents](#)

sites, and/or period for completion of the work. If a change order represents a firm price commitment from a customer, we account for the revised estimate as if it had been included in the original estimate, effectively recognizing the pro rata impact of the new estimate on our calculation of progress toward completion in the period in which the firm commitment is received. If a change order is unpriced: (1) we include the costs of contract performance in our calculation of progress toward completion in the period in which the costs are incurred or become probable; and (2) when it is determined that the revenue is probable of recovery, we include the change order revenue, limited to the costs incurred to date related to the change order, in our calculation of progress toward completion. Margin is not recorded on unpriced change orders unless realization is assured beyond a reasonable doubt. The assessment of realization may be based upon our previous experience with the customer or based upon our receiving a firm price commitment from the customer.

Progress billings generally are issued contingent on completion of certain phases of the work as stipulated in the contract. Revenue in excess of progress billings on contracts accounted for under the percentage of completion method amounted to \$194.5 million and \$210.9 million at December 31, 2007 and 2006, respectively. These unbilled receivables are reported in trade receivables on the consolidated balance sheets. Progress billings and cash collections in excess of revenue recognized on a contract are classified as advance payments and progress billings within current liabilities on the consolidated balance sheets.

Cash equivalents—We consider investments in all highly-liquid debt instruments with original maturities of three months or less to be cash equivalents.

Trade receivables—We provide an allowance for doubtful accounts on trade receivables equal to the estimated uncollectible amounts. This estimate is based on historical collection experience and a specific review of each customer's trade receivable balance.

Inventories—Inventories are stated at the lower of cost or net realizable value. Inventory costs include those costs directly attributable to products, including all manufacturing overhead but excluding costs to distribute. Cost is determined on the last-in, first-out ("LIFO") basis for all domestic inventories, except certain inventories relating to construction-type contracts, which are stated at the actual production cost incurred to date, reduced by the portion of these costs identified with revenue recognized. The first-in, first-out ("FIFO") method is used to determine the cost for all other inventories.

Impairment of long-lived and intangible assets—Long-lived assets, including property, plant and equipment, identifiable intangible assets being amortized and capitalized software costs are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of the long-lived asset may not be recoverable. The carrying amount of a long-lived asset is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. If it is determined that an impairment loss has occurred, the loss is measured as the amount by which the carrying amount of the long-lived asset exceeds its fair value.

Long-lived assets held for sale are reported at the lower of carrying value or fair value less cost to sell.

Property, plant, and equipment—Property, plant, and equipment is recorded at cost. Depreciation for financial reporting purposes is provided principally on the straight-line basis over the estimated useful lives of the assets (land improvements—20 to 35 years, buildings—20 to 50 years; and machinery and equipment—3 to 20 years). Gains and losses are reflected in income upon the sale or retirement of assets. Expenditures that extend the useful lives of property, plant, and equipment are capitalized and depreciated over the estimated new remaining life of the asset.

Capitalized software costs—Other assets include the capitalized cost of internal use software (including Internet web sites). The assets are stated at cost less accumulated amortization and totaled \$24.3 million and \$22.0 million at December 31, 2007 and 2006, respectively. These software costs include significant purchases of software and internal and external costs incurred during the application development stage of software projects. These costs are amortized on a straight-line basis over the estimated useful lives of the assets. For internal use software, the useful lives range from three to ten years. For Internet web site costs, the estimated useful lives do not exceed three years.

Goodwill and other intangible assets—Goodwill is not subject to amortization but is tested for impairment on an annual basis (or more frequently if impairment indicators arise) under the provisions of Statement of Financial Accounting Standards ("SFAS") No. 142, "Goodwill and Other Intangible Assets." We have established October 31 as the date of our annual test for impairment of goodwill. Impairment losses are calculated at the reporting unit level, and represent the excess of the carrying value of reporting unit goodwill over its implied fair value. The implied fair value of goodwill is determined by a two-step process. The first compares the fair value of the reporting unit (measured as the present value of expected future cash flows) to its carrying amount. If the fair value of the reporting unit is less than its carrying amount, a second step is performed. In this step, the fair value of the reporting unit is allocated to its assets and liabilities to determine the implied fair value of goodwill, which is used to measure the impairment loss. We have not recognized any impairment for the years ended December 31, 2007 or 2006 as the fair values of our reporting units with goodwill balances exceed our carrying amounts.

[Table of Contents](#)

Our acquired intangible assets are being amortized on a straight-line basis over their estimated useful lives, which generally range from 7 to 40 years. None of our acquired intangible assets have indefinite lives.

Reserve for discontinued operations—This reserve reflects liabilities of our disposed businesses. The balance includes reserves related to personal injury and product liability claims associated with our discontinued operations as well as other unpaid employee-related and transaction costs resulting from the disposals. Personal injury and product liability claims reserves are recorded based on an actuarially-determined estimate of liabilities for both reported claims and incurred but unreported claims. Adjustments to the reserve for discontinued operations are included in results of discontinued operations in the consolidated statements of income. The reserve for discontinued operations, which is recorded in other long-term liabilities in the consolidated balance sheets, amounted to \$2.2 million and \$4.3 million at December 31, 2007 and 2006, respectively.

Income taxes—Current income taxes are provided on income reported for financial statement purposes, adjusted for transactions that do not enter into the computation of income taxes payable in the same year. Deferred tax assets and liabilities are measured using enacted tax rates for the expected future tax consequences of temporary differences between the carrying amounts and the tax bases of assets and liabilities. A valuation allowance is established whenever management believes that it is more likely than not that deferred tax assets may not be realizable.

Income taxes are not provided on our equity in undistributed earnings of foreign subsidiaries or affiliates when it is management's intention that such earnings will remain invested in those companies. Taxes are provided on such earnings in the year in which the decision is made to repatriate the earnings.

Stock-based employee compensation—Prior to October 1, 2005, we applied the fair value recognition provisions of SFAS No. 123, "Accounting for Stock-Based Compensation." We measure compensation cost on restricted stock awards based on the market price at the grant date and the number of shares awarded. The compensation cost for each award is recognized ratably over the applicable service period, after taking into account estimated forfeitures. On October 1, 2005, we adopted the provisions of SFAS No. 123R, "Share-Based Payment," which modified our recognition of share-based compensation by (i) incorporating an estimate of forfeitures in the calculation of current expense to record and (ii) adjusting the recognition period for new awards that accelerate vesting upon retirement to reflect the lesser of the stated vesting period or the period until the employee becomes retirement eligible.

Common stock held in employee benefit trust—Shares of our common stock are purchased by the plan administrator of the FMC Technologies, Inc. Non-Qualified Savings and Investment Plan and placed in a trust owned by us. Purchased shares are recorded at cost and classified as a reduction of stockholders' equity in the consolidated balance sheets.

Earnings per common share ("EPS")—Basic EPS is computed using the weighted-average number of common shares outstanding. Diluted EPS gives effect to the potential dilution of earnings which could have occurred if additional shares were issued for stock option exercises and restricted stock under the treasury stock method. The treasury stock method assumes that proceeds that would be obtained upon exercise of common stock options and issuance of restricted stock are used to buy back outstanding common stock at the average market price during the period.

Foreign currency—Financial statements of operations for which the U.S. dollar is not the functional currency, and are located in non-highly inflationary countries, are translated to the U.S. dollar prior to consolidation. Assets and liabilities are translated at the exchange rate in effect at the balance sheet date, while income statement accounts are translated at the average exchange rate for each period. For these operations, translation gains and losses are recorded as a component of accumulated other comprehensive income (loss) in stockholders' equity until the foreign entity is sold or liquidated. For operations in highly inflationary countries and where the local currency is not the functional currency, inventories, property, plant and equipment, and other non-current assets are converted to U.S. dollars at historical exchange rates, and all gains or losses from conversion are included in net income. Foreign currency effects on cash, cash equivalents, and debt in hyperinflationary economies are included in interest income or expense.

Derivative financial instruments—Derivatives are recognized in the consolidated balance sheets at fair value, with classification as current or non-current based upon the maturity of the derivative instrument. Changes in the fair value of derivative instruments are recorded in current earnings or deferred in accumulated other comprehensive income (loss), depending on the type of hedging transaction and whether a derivative is designated as, and is effective as, a hedge.

[Table of Contents](#)

Hedge accounting is only applied when the derivative is deemed to be highly effective at offsetting changes in anticipated cash flows of the hedged item or transaction. Changes in fair value of derivatives that are designated as cash flow hedges are deferred in accumulated other comprehensive income (loss) until the underlying transactions are recognized in earnings. At such time related deferred hedging gains or losses are also recorded in operating earnings on the same line as the hedged item. Effectiveness is assessed at the inception of the hedge and on a quarterly basis. Effectiveness of forward contract cash flow hedges are assessed based solely on changes in fair value attributable to the change in the spot rate. The change in the fair value of the contract related to the change in forward rates is excluded from the assessment of hedge effectiveness. Changes in this excluded component of the derivative instrument, along with any ineffectiveness identified, are recorded in operating earnings as incurred. We document our risk management strategy and hedge effectiveness at the inception of and during the term of each hedge. We also use forward contracts to hedge foreign currency assets and liabilities. These contracts are not designated as hedges; therefore, the changes in fair value of these contracts are recognized in other income (expense), net as they occur and offset gains or losses on the remeasurement of the related asset or liability.

Cash flows from derivative contracts are reported in the consolidated statements of cash flows in the same categories as the cash flows from the underlying transactions.

Recently issued accounting pronouncements—In September 2006, the Financial Accounting Standards Board (“FASB”) issued SFAS No. 157, “Fair Value Measurements,” which defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. SFAS No. 157 is effective in fiscal years beginning after November 15, 2007. Delayed application is permitted for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until fiscal years beginning after November 15, 2008. We adopted SFAS No. 157 on January 1, 2008 for financial assets and financial liabilities and have chosen to delay the adoption for nonfinancial assets and nonfinancial liabilities until January 1, 2009. We do not believe that the adoption of this pronouncement will have a material effect on our results of operations or financial position.

In February 2007, the FASB issued SFAS No. 159, “The Fair Value Option for Financial Assets and Financial Liabilities.” SFAS No. 159 permits entities to choose to measure certain financial instruments and other items at fair value. Under SFAS No. 159, the decision to measure items at fair value is made at specified election dates on an irrevocable instrument-by-instrument basis. This statement is effective for financial statements issued for fiscal years beginning after November 15, 2007. We do not expect to elect this option of measurement on any of our financial instruments, and therefore, we do not believe the adoption of SFAS No. 159 on January 1, 2008 will have a significant impact on our financial position, results of operations or cash flows.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), “Business Combinations,” replacing SFAS No. 141. SFAS No. 141R changes or clarifies the acquisition method of accounting for acquired contingencies, transaction costs, step acquisitions, restructuring costs and other major areas affecting how the acquirer recognizes and measures the assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree. In addition, this pronouncement amends previous interpretations of intangible asset accounting by requiring the capitalization of in-process research and development and proscribing impacts to current income tax expense (rather than a reduction to goodwill) for changes in deferred tax benefits related to a business combination. SFAS No. 141R will be applied prospectively for business combinations occurring after December 31, 2008.

In December 2007, the FASB issued SFAS No. 160, “Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51.” SFAS No. 160 will standardize the accounting for and reporting of minority interests in the financial statements, which will be presented as noncontrolling interests and classified as a component of equity. In addition, statements of operations will report consolidated net income before an allocation to both the parent and the noncontrolling interest. This new presentation will have an impact on the basic financial statements as well as the disclosures to clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling interests. SFAS No. 160 is effective for fiscal years beginning after December 15, 2008. We have not yet determined the impact, if any, that the adoption of SFAS No. 160 will have on our results of operations or financial position.

[Table of Contents](#)**NOTE 2. EARNINGS PER SHARE (“EPS”)**

The following schedule is a reconciliation of the basic and diluted EPS computations:

(In millions, except per share data)	Year Ended December 31,		
	2007	2006	2005
Basic earnings per share:			
Income from continuing operations	\$307.5	\$210.9	\$132.2
Weighted average number of shares outstanding	131.3	137.0	138.0
Basic earnings per share from continuing operations	\$ 2.34	\$ 1.54	\$ 0.96
Diluted earnings per share:			
Income from continuing operations	\$307.5	\$210.9	\$132.2
Weighted average number of shares outstanding	131.3	137.0	138.0
Effect of dilutive securities:			
Options on common stock	1.0	1.7	2.2
Restricted stock	1.5	1.6	1.4
Total shares and dilutive securities	133.8	140.3	141.6
Diluted earnings per share from continuing operations	\$ 2.30	\$ 1.50	\$ 0.93

NOTE 3. DISCONTINUED OPERATIONS

We report discontinued operations in accordance with the guidance of SFAS No. 144, “Accounting for the Impairment or Disposal of Long-Lived Assets.” Accordingly, we report businesses or asset groups as discontinued operations when we commit to a plan to divest the business or asset group and the sale of the business or asset group is deemed probable within the next 12 months.

Discontinued operations include our FMC Technologies Floating Systems, Inc. (“Floating Systems”) business, which was sold in the fourth quarter of 2006, from the Energy Production Systems segment and two units from our FoodTech segment, one of which was sold in the third quarter of 2007 generating an after-tax gain of \$3.1 million. The results of these businesses, including the gains on dispositions, have been reported as discontinued operations for all periods presented.

The consolidated statements of income include the following in discontinued operations:

(In millions)	Year Ended December 31,		
	2007	2006	2005
Revenue	\$23.2	\$162.3	\$119.8
Income (loss) before income taxes	\$ (2.6)	\$ 93.0	\$ (46.7)
Income tax provision (benefit)	2.1	27.6	(20.6)
Income (loss) from discontinued operations	\$ (4.7)	\$ 65.4	\$ (26.1)

During 2007, we recorded restructuring expense and provisions for doubtful accounts and inventory obsolescence totaling \$4.5 million related to our FoodTech unit in discontinued operations that has yet to be divested. We expect that the final asset sale will be completed during the first quarter of 2008. Income from discontinued operations in 2006 also includes \$1.9 million in income resulting from the resolution of product liability claims related to our discontinued construction equipment group.

Table of Contents

The major classes of assets and liabilities of businesses reported as discontinued operations included in the accompanying consolidated balance sheets are shown below:

	Year Ended December 31,	
	2007	2006
(In millions)		
Assets:		
Trade receivables, net	\$ 1.5	\$ 7.9
Inventories	0.9	7.6
Property, plant and equipment, net	—	1.3
Other assets	—	9.5
Assets of discontinued operations	\$ 2.4	\$ 26.3
Liabilities:		
Accounts payable, trade and other	\$ 0.2	\$ 2.7
Advance payments and progress billings	0.1	3.4
Other liabilities	3.0	9.2
Liabilities of discontinued operations	\$ 3.3	\$ 15.3

NOTE 4. BUSINESS COMBINATIONS AND DIVESTITURES

Business Combinations—In August 2003, we acquired 55% of CDS Engineering BV (“CDS”) and retained a commitment to purchase the remaining 45% in 2009 from the original CDS owners, who are members of CDS management and therefore related parties.

In the first quarter of 2007, CDS issued 18,000 shares to the minority interest shareholder of a CDS subsidiary in exchange for all of the minority interest outstanding of that subsidiary. The minority interest holder of the subsidiary was a member of CDS management and was therefore a related party. This transaction resulted in the minority shareholder obtaining a 9% interest in CDS and diluted the original CDS owners’ and our interest to 40.95% and 50.05%, respectively.

The agreement associated with this transaction required that we repurchase the CDS shares issued, and therefore, we recorded the transaction as the purchase of minority interest by issuing redeemable shares in accordance with EITF D-98 “Classification and Measurement of Redeemable Securities.” The initial carrying amount of the redeemable shares was \$10.0 million and reflected the fair value of the shares issued in exchange for the subsidiary’s minority interest. We have recorded \$3.1 million in intangibles, \$6.8 million in goodwill and \$0.8 million in deferred tax liabilities in connection with the transaction. During the fourth quarter, we converted the redeemable securities into a note payable in two installments scheduled for 2009 and 2011 (Note 15). We have agreed to provide consideration in 2011 contingent upon earnings and continued employment. The 2011 payment, if any, was negotiated primarily to encourage continued employment and therefore will be accounted for as compensation expense over the service period.

In the second quarter of 2007, we amended the 2003 Sales and Purchase Agreement with the original CDS owners to allow for the purchase of their 40.95% interest immediately for cash of \$40.0 million plus a payment in 2009 consisting of a fixed amount of 11.2 million Euros and a variable component based on CDS earnings. During the fourth quarter, we settled both the fixed and variable commitments with a payment of 13.5 million Euros. We have recorded \$35.6 million in intangible assets, \$27.6 million in goodwill and \$4.3 million in deferred tax liabilities. These transactions accelerated our planned buyout of the minority shareholders and allowed us to record 100% of CDS earnings beginning April 2, 2007. CDS has been a consolidated subsidiary reported in the Energy Production Systems segment since our initial investment in 2003.

Divestitures—

FMC Technologies Floating Systems, Inc.—On November 29, 2006, we announced the sale of our Floating Systems subsidiary for \$54.4 million, and the transaction closed on December 29, 2006. Floating Systems supplied turret and mooring systems, riser systems and control and service buoys for a broad range of marine and subsea projects. We recorded a gain on disposal of \$34.8 million, net of tax of \$18.5 million. Net assets disposed in the sale included \$1.7 million in goodwill.

GTL Microsystems—On December 21, 2005, we sold our 60% interest in GTL Microsystems (“GTL”), a joint venture with Accentus plc, for \$9.8 million. This venture was created to advance the commercial development of gas-to-liquids technology and was part of the Energy Production Systems segment. We recorded a pre-tax gain of \$8.6 million in connection with the sale.

[Table of Contents](#)

MODEC International LLC—We owned a 37.5% interest in MODEC International LLC, a joint venture investment with a subsidiary of MODEC, Inc. In November 2004, we sold our interest in the joint venture to MODEC, Inc. and received proceeds valued at \$77.0 million, consisting of 3.0 billion yen, or \$27.9 million, and 2.6 million common shares of MODEC, Inc., valued at \$49.1 million. During September 2005, we sold all of our common shares of MODEC, Inc. for \$74.4 million and realized a pre-tax gain of \$25.3 million for the year ended December 31, 2005.

With the sale of our Floating Systems subsidiary, we have no continuing involvement in floating production systems. Therefore, we have reported this asset group as a discontinued operation for all periods presented in the consolidated financial statements. The GTL joint venture was a part of this asset group, and thus, the gain from the divestiture in 2005 has been included in discontinued operations in the consolidated statements of income. The gain on sale of our shares of MODEC, Inc. remains in income from continuing operations for 2005 as the gain resulted from management's decision to hold the investment after the transaction date rather than as a result of the operations that were discontinued.

NOTE 5. INVENTORIES

Inventories consisted of the following:

	December 31,	
	2007	2006
(In millions)		
Raw materials	\$ 198.7	\$ 155.6
Work in process	148.2	168.3
Finished goods	497.3	420.0
	<u>844.2</u>	<u>743.9</u>
Gross inventories before LIFO reserves and valuation adjustments	844.2	743.9
LIFO reserves and valuation adjustments	(169.0)	(159.5)
	<u>675.2</u>	<u>584.4</u>
Net inventories	\$ 675.2	\$ 584.4

Net inventories accounted for under the LIFO method totaled \$183.8 million and \$165.9 million at December 31, 2007 and 2006, respectively. The current replacement costs of LIFO inventories exceeded their recorded values by \$115.2 million and \$108.5 million at December 31, 2007 and 2006, respectively. During 2006 we reduced certain LIFO inventories which were carried at costs lower than the current replacement costs. The result was a decrease in cost of sales by approximately \$0.1 million in 2006. There were no reductions of LIFO inventory in 2007 or 2005.

NOTE 6. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment consisted of the following:

	December 31,	
	2007	2006
(In millions)		
Land and land improvements	\$ 21.7	\$ 23.7
Buildings	191.5	170.9
Machinery and equipment	775.6	659.0
Construction in process	147.4	77.4
	<u>1,136.2</u>	<u>931.0</u>
Accumulated depreciation	(557.1)	(486.6)
	<u>579.1</u>	<u>444.4</u>
Property, plant and equipment, net	\$ 579.1	\$ 444.4

Depreciation expense was \$64.5 million, \$56.1 million, and \$52.7 million in 2007, 2006, and 2005, respectively.

The amount of interest cost capitalized was \$5.4 million, \$3.0 million and \$1.3 million in 2007, 2006 and 2005, respectively.

[Table of Contents](#)

NOTE 7. GOODWILL AND INTANGIBLE ASSETS

Goodwill—

The carrying amount of goodwill by business segment was as follows:

	December 31,	
	2007	2006
(In millions)		
Energy Production Systems	\$133.7	\$ 87.7
Energy Processing Systems	14.1	10.7
Subtotal Energy Systems	147.8	98.4
FoodTech	15.7	15.4
Airport Systems	9.1	9.0
Total goodwill	\$172.6	\$122.8

In 2007, we recorded \$34.4 million in goodwill in connection with our purchases of minority interests in CDS (Note 4) and \$3.3 million related to an acquisition in the Energy Processing Systems segment. Certain of our goodwill balances are subject to foreign currency translation adjustments. Fluctuations in exchange rates contributed \$12.1 million of the increase in the total goodwill balance for 2007.

*Intangible assets—*The components of intangible assets were as follows:

	December 31,			
	2007		2006	
	Gross carrying amount	Accumulated amortization	Gross carrying amount	Accumulated amortization
(In millions)				
Customer lists	\$ 50.0	\$ 10.6	\$ 32.6	\$ 9.2
Patents and acquired technology	74.2	28.8	50.5	23.9
Trademarks	22.2	7.5	20.3	6.2
Other	4.5	3.2	1.3	0.8
Total intangible assets	\$150.9	\$ 50.1	\$104.7	\$ 40.1

Additions to our intangible assets during 2007 included assets associated with our purchases of minority interests in CDS (Note 4). The acquisition included customer lists of \$15.6 million with a weighted average life of 15 years and patents and acquired technology of \$19.6 million with a weighted average life of 15 years.

All of our acquired identifiable intangible assets are subject to amortization and, where applicable, foreign currency translation adjustments. We recorded \$8.9 million, \$4.5 million and \$4.6 million in amortization expense related to acquired intangible assets during the years ended December 31, 2007, 2006 and 2005, respectively. In the fourth quarter of 2007, we determined that the remaining lives for intangible assets related to the acquisition of CDS were in excess of their estimated useful lives. Therefore, we effected a change in estimate to reduce the remaining life for customer lists from 25 years to 15 years; for patents and acquired technology from 20 years to 15 years; and for trademarks from 20 years to 10 years. We accounted for this change in estimate in the fourth quarter of 2007 and the impact was not material. During the years 2008 through 2012, annual amortization expense is expected to be as follows: \$9.6 million in 2008, \$8.8 million in 2009, \$8.2 million in 2010, \$7.9 million in 2011, and \$7.7 million in 2012.

NOTE 8. SALE LEASEBACK TRANSACTION

In March 2007, we sold and leased back property in Houston, Texas consisting of land, corporate offices and production facilities primarily related to the Energy Production Systems segment. We received proceeds of \$58.1 million in connection with the sale. The carrying value of the property sold was \$20.3 million. We accounted for the transaction as a sale leaseback resulting in (i) first quarter 2007 recognition of \$1.3 million of the \$37.4 million gain on the transaction and (ii) the deferral of the remaining \$36.1 million of the gain, which will be amortized to rent expense over a noncancellable ten-year lease term. The deferred gain is presented in other liabilities in the consolidated balance sheet. The lease expires in 2022 and provides for two 5-year optional extensions as well as the option to terminate the lease in 2017, subject to a \$3.3 million fee. Annual rent of \$4.2 million escalates 2% per year. The lease has been recorded as an operating lease.

[Table of Contents](#)

NOTE 9. DEBT

In December 2007, we entered into a \$600 million five-year revolving credit agreement maturing in December 2012 with JPMorgan Chase Bank, N.A., as Administrative Agent. Borrowings under the credit agreement accrue interest at a rate equal to, at our option; either (a) a base rate determined by reference to the higher of (1) the agent's prime rate and (2) the federal funds rate plus 1/2 of 1% or (b) an interest rate of 31 basis points above the London Interbank Offered Rate ("LIBOR"). The margin over LIBOR is variable and is determined based on our debt rating. Among other restrictions, the terms of the credit agreement include negative covenants related to liens and a financial covenant related to the debt to earnings ratio. We are in compliance with all restrictive covenants as of December 31, 2007.

Available capacity under the credit facility is reduced by outstanding letters of credit associated with the facility, which totaled \$19.6 million as of December 31, 2007, and any outstanding commercial paper. Unused capacity under the credit facility at December 31, 2007 totaled \$477.4 million.

In connection with the establishment of the \$600 million revolving credit agreement in December 2007, we terminated our \$250 million and \$370 million five-year revolving credit agreements maturing November 2010. Borrowings on these facilities as of December 31, 2006 totaled \$203.0 million.

We have a \$5 million short-term uncommitted credit facility maturing on December 31, 2008. There were no borrowings under the facility at December 31, 2007.

Commercial paper—Under our commercial paper program, we have the ability to access \$400 million of short-term financing through our commercial paper dealers subject to the limit of unused capacity of the \$600 million five-year revolving credit facility. Commercial paper borrowings are issued at market interest rates.

Property financing—In September 2004, we entered into agreements for the sale and leaseback of an office building having a net book value of \$8.5 million. Under the terms of the agreement, the building was sold for \$9.7 million in net proceeds and leased back under a 10-year lease. We have subleased this property to a third party under a lease agreement that is being accounted for as an operating lease. We have accounted for the transaction as a financing transaction and are amortizing the related obligation using an effective annual interest rate of 5.37%.

Uncommitted credit—We have uncommitted credit lines at many of our international subsidiaries for immaterial amounts. We utilize these facilities to provide a more efficient daily source of liquidity. The effective interest rates depend upon the local national market.

Short-term debt and current portion of long-term debt—Short-term debt and current portion of long-term debt consisted of the following:

(In millions)	December 31,	
	2007	2006
Property financing	\$ 0.4	\$ 0.4
Foreign uncommitted credit facilities	6.8	5.3
Other	—	0.1
Total short-term debt and current portion of long-term debt	\$ 7.2	\$ 5.8

Table of Contents

Long-term debt—Long-term debt consisted of the following:

(In millions)	December 31,	
	2007	2006
Revolving credit facilities	\$ —	\$203.0
Commercial paper (1)	103.0	—
Property financing	8.9	9.3
Other	0.7	0.8
Total long-term debt	112.6	213.1
Less: current portion	(0.4)	(0.5)
Long-term debt, less current portion	\$112.2	\$212.6

- (1) Committed credit available under our five-year revolving credit facility provided the ability to refinance our commercial paper obligations on a long-term basis. Therefore, at December 31, 2007, as we have both the ability and intent to refinance these obligations on a long-term basis, our commercial paper borrowings were classified as long-term on the consolidated balance sheet. Commercial paper borrowings as of December 31, 2007 had an average interest rate of 5.05%.

Maturities of total long-term debt as of December 31, 2007, are payable as follows: \$0.4 million in 2008, \$0.4 million in 2009, \$0.5 million in 2010, \$0.5 million in 2011, \$103.7 million in 2012 and \$7.1 million thereafter.

Interest rate swaps—During 2007, we held interest rate swaps related to interest payments on \$150.0 million of our variable rate borrowings on our \$370 million revolving credit facility. The effect of these interest rate swaps, which were acquired in December 2005, was to fix the effective annual interest rate of these variable rate borrowings at 5.25%. The swaps were accounted for as cash flow hedges. In December 2007, the variable rate borrowings on the \$370 million revolving credit facility were repaid in full and replaced with variable rate commercial paper. The swaps were terminated in January 2008.

The deferred gain from a prior discontinued swap transaction in the amount of \$4.6 million was included in accumulated other comprehensive loss as of December 31, 2006, and \$3.6 million of the gain has been amortized into interest expense during 2007 as interest expense on the underlying debt affected earnings.

NOTE 10. INCOME TAXES

Domestic and foreign components of income before income taxes are shown below:

(In millions)	Year Ended December 31,		
	2007	2006	2005
Domestic	\$138.6	\$ 69.3	\$ 9.7
Foreign	325.4	225.7	199.4
Income before income taxes	\$464.0	\$295.0	\$209.1

The provision for income taxes consisted of:

(In millions)	Year Ended December 31,		
	2007	2006	2005
Current:			
Federal	\$ 60.6	\$ 6.2	\$ 30.7
State	5.1	3.3	3.0
Foreign	85.3	38.0	53.2
Total current	151.0	47.5	86.9
Deferred:			
(Decrease) increase in the valuation allowance for deferred tax assets	1.5	(12.0)	(1.0)
Other deferred tax expense (benefit)	4.0	48.6	(9.0)
Total deferred	5.5	36.6	(10.0)
Provision for income taxes	\$156.5	\$ 84.1	\$ 76.9

Table of Contents

Significant components of our deferred tax assets and liabilities were as follows:

	December 31,	
	2007	2006
(In millions)		
Deferred tax assets attributable to:		
Accrued expenses	\$ 36.5	\$ 48.0
Foreign tax credit carryforwards	28.4	31.9
Accrued pension and other postretirement benefits	27.8	26.1
Stock-based compensation	26.2	23.1
Net operating loss carryforwards	16.5	19.1
Inventories	18.8	16.5
Other	25.0	0.4
	<u>179.2</u>	<u>165.1</u>
Valuation allowance	(6.4)	(4.9)
	<u>172.8</u>	<u>160.2</u>
Deferred tax liabilities attributable to:		
Revenue in excess of billings on contracts accounted for under the percentage of completion method	63.8	54.7
Property, plant and equipment, goodwill and other assets	72.3	44.5
	<u>136.1</u>	<u>99.2</u>
Deferred tax liabilities	136.1	99.2
	<u>136.1</u>	<u>99.2</u>
Net deferred tax assets	\$ 36.7	\$ 61.0

At December 31, 2007 and 2006, the carrying amount of net deferred tax assets and the related valuation allowance included the impact of foreign currency translation adjustments. Included in our deferred tax assets at December 31, 2007 are U.S. foreign tax credit carryforwards of \$28.4 million, which, if not utilized, will begin to expire after 2014. Realization of these deferred tax assets is dependent on the generation of sufficient U.S. taxable income prior to the above date. Based on long-term forecasts of operating results, management believes that it is more likely than not that domestic earnings over the forecast period will result in sufficient U.S. taxable income to fully realize these deferred tax assets. In its analysis, management has considered the effect of foreign deemed dividends and other expected adjustments to domestic earnings that are required in determining U.S. taxable income. Foreign earnings taxable to us as dividends, including deemed dividends for U.S. tax purposes, were \$78.5 million, \$20.1 million, and \$474.2 million in 2007, 2006 and 2005, respectively. The significant increase in the amount of dividends in 2005 compared to 2007 and 2006 is due to the repatriation of foreign earnings under the American Jobs Creation Act of 2004 (the "JOBS Act") in 2005. Also included in deferred tax assets are tax benefits related to net operating loss carryforwards attributable to foreign entities. If not utilized, these net operating loss carryforwards will begin to expire in 2009. Management believes it is more likely than not that we will not be able to utilize certain of these operating loss carryforwards before expiration; therefore, we have established a valuation allowance against the related deferred tax assets.

By country, current and non-current deferred income taxes included in our consolidated balance sheet at December 31, 2007, were as follows:

	December 31, 2007		
	Current asset (liability)	Non-current asset (liability)	Total
(In millions)			
United States	\$ 34.0	\$ 83.2	\$117.2
Norway	(53.5)	5.9	(47.6)
Brazil	(11.2)	(8.2)	(19.4)
Other foreign	(0.4)	(13.1)	(13.5)
	<u>34.0</u>	<u>67.8</u>	<u>101.8</u>
Net deferred tax assets (liabilities)	\$ (31.1)	\$ 67.8	\$ 36.7

In June 2006, the FASB issued Interpretation ("FIN") No. 48, "Accounting for Uncertainty in Income Taxes," which changes the threshold for recognizing the benefit of an uncertain tax position, prescribes a method for measuring the tax benefit to be recorded and requires incremental quantitative and qualitative disclosures about uncertain tax positions. We adopted FIN No. 48 effective January 1, 2007. The adoption of FIN No. 48 did not have a material effect on our results of operations or financial position.

[Table of Contents](#)

A reconciliation of the beginning and ending amount of unrecognized tax benefits is as follows:

(In millions)	Federal, State and Foreign Tax	Accrued Interest and Penalties	Gross Unrecognized Income Tax Benefits	Deferred Income Tax Benefits	Net
Balance at January 1, 2007	\$ 18.5	\$ 2.1	\$ 20.6	\$ (1.5)	\$19.1
Additions for tax positions related to the current year	2.2	—	2.2	(0.1)	2.1
Additions for tax positions related to prior years	0.3	2.0	2.3	(0.8)	1.5
Reductions for tax positions due to settlements	—	—	—	—	—
Reductions due to a lapse of the statute of limitations	—	—	—	—	—
Other reductions for tax positions related to prior years	(2.1)	(0.6)	(2.7)	0.3	(2.4)
Balance at December 31, 2007	18.9	3.5	22.4	(2.1)	20.3
Less tax positions related to temporary differences	(2.1)	—	(2.1)	0.1	(2.0)
Tax positions that, if recognized, would impact the effective tax rate as of December 31, 2007	\$ 16.8	\$ 3.5	\$ 20.3	\$ (2.0)	\$18.3

It is our policy to classify interest expense and penalties recognized on underpayments of income taxes as income tax expense. The gross amounts of interest expense and penalties included in unrecognized tax benefits as of January 1 and December 31, 2007 are reflected in the table above.

It is reasonably possible that within twelve months unrecognized tax benefits related to certain tax reporting positions taken in prior periods could decrease by up to \$11.7 million, due to either the expiration of the statute of limitations in certain jurisdictions or the resolution of current income tax examinations, or both.

Tax years after 1995, 2001 and 2002 remain subject to examination in Norway, Brazil and the United States, respectively.

The effective income tax rate was different from the statutory U.S. federal income tax rate due to the following:

	Year Ended December 31,		
	2007	2006	2005
Statutory U.S. federal income tax rate	35%	35%	35%
Net difference resulting from:			
Foreign earnings subject to different tax rates	(4)	(4)	(6)
Tax on foreign intercompany dividends and deemed dividends for tax purposes	1	—	14
Settlement of IRS audit	—	—	(2)
Adjustment of foreign deferred tax accounts	—	—	(3)
Change in valuation allowance	—	(4)	—
Other	2	2	(1)
Total difference	(1)	(6)	2
Effective income tax rate	34%	29%	37%

The 2006 provision for income taxes included the reversal of a \$12.2 million valuation allowance on deferred tax assets related to our Brazilian operations. Profitability and updated projections for future taxable income in Brazil caused us to change our assessment of the recoverability of deferred tax assets and reverse the valuation allowance established in prior years.

Included in the 2005 provision for income taxes were taxes related to the repatriation of foreign earnings during the fourth quarter of 2005. The JOBS Act created an incentive for U.S. corporations to repatriate earnings of foreign subsidiaries in 2005 by providing an 85% dividends received deduction for qualifying dividends. We recorded income tax expense associated with the repatriation plan of approximately \$25.5 million in the fourth quarter of 2005.

Also included in the 2005 provision for income taxes is a tax benefit of \$5.2 million resulting from the resolution of a U.S. federal income tax audit and a tax benefit of \$5.4 million resulting from the correction of an immaterial error related to accounting for deferred taxes.

[Table of Contents](#)

U.S. income taxes have not been provided on undistributed earnings of foreign subsidiaries. The cumulative balance of these undistributed earnings was \$532.3 million at December 31, 2007. It is not practicable to determine the amount of applicable taxes that would be incurred if any of these earnings were repatriated.

NOTE 11. PENSIONS AND POSTRETIREMENT AND OTHER BENEFIT PLANS

We have funded and unfunded defined benefit pension plans that together cover substantially all of our U.S. employees. The plans provide defined benefits based on years of service and final average salary. Foreign-based employees are eligible to participate in FMC Technologies-sponsored or government-sponsored benefit plans to which we contribute. Several of the foreign defined benefit pension plans sponsored by us provide for employee contributions; the remaining plans are noncontributory.

We have other postretirement benefit plans covering substantially all of our U.S. employees who were hired prior to January 1, 2003. The postretirement health care plans are contributory; the postretirement life insurance plans are noncontributory.

We have adopted the provisions of SFAS No. 87, "Employers' Accounting for Pensions," as amended by SFAS No. 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)." SFAS No. 158 requires recognition of the funded status of defined benefit postretirement plans as an asset or liability in the consolidated balance sheet and to recognize changes in that funded status in comprehensive income in the year in which the changes occur. SFAS No. 158 also requires measurement of a plan's assets and its obligations that determine its funded status as of the date of the consolidated balance sheet. We have applied this guidance to our domestic pension and other postretirement benefit plans as well as for many of our non-U.S. plans, including those covering employees in the United Kingdom, Norway, Germany, France, Sweden and Canada. In 2007, we included our defined benefit plans covering employees in Belgium to the pension disclosures. The opening projected benefit obligation and plan assets are reflected in the plan transition caption of the funded status reconciliation. Pension expense measured in compliance with SFAS No. 87 for the other non-U.S. pension plans is not materially different from the locally reported pension expense.

Table of Contents

The funded status of our U.S. qualified and nonqualified pension plans, certain foreign pension plans and U.S. postretirement health care and life insurance benefit plans, together with the associated balances recognized in our consolidated financial statements as of December 31, 2007 and 2006, were as follows:

	Pensions		Other postretirement benefits	
	2007	2006	2007	2006
(In millions)				
Accumulated benefit obligation	\$755.7	\$713.2		
Projected benefit obligation at January 1	\$841.6	\$739.7	\$ 20.5	\$ 21.1
Service cost	39.0	32.6	0.3	0.4
Interest cost	48.9	42.0	1.2	1.2
Actuarial (gain) loss	(19.9)	22.2	(0.7)	(0.4)
Amendments	0.6	(3.9)	0.1	—
Plan transition	13.2	—	—	—
Foreign currency exchange rate changes	15.1	30.2	—	—
Plan participants' contributions	3.3	4.8	0.9	2.4
Benefits paid	(30.1)	(26.0)	(2.6)	(4.2)
Projected benefit obligation at December 31	911.7	841.6	19.7	20.5
Fair value of plan assets at January 1	769.3	630.2	—	—
Actual return on plan assets	34.9	92.4	—	—
Company contributions	43.2	45.0	1.7	1.8
Plan transition	7.8	—	—	—
Foreign currency exchange rate changes	13.4	22.9	—	—
Plan participants' contributions	3.3	4.8	0.9	2.4
Benefits paid	(30.1)	(26.0)	(2.6)	(4.2)
Fair value of plan assets at December 31	841.8	769.3	—	—
Funded status of the plans (liability) at December 31	\$ (69.9)	\$ (72.3)	\$ (19.7)	\$ (20.5)
Other noncurrent assets	\$ 17.9	\$ 11.0	\$ —	\$ —
Current portion of accrued pension and other postretirement benefits	(13.6)	(4.2)	(1.5)	(1.8)
Accrued pension and other postretirement benefits, net of current portion	(74.2)	(79.1)	(18.2)	(18.7)
Funded status recognized in the consolidated balance sheets at December 31, 2007 and 2006	\$ (69.9)	\$ (72.3)	\$ (19.7)	\$ (20.5)
Amounts recognized in accumulated other comprehensive (income) loss:				
Unrecognized actuarial (gain) loss	\$128.7	\$129.8	\$ (0.2)	\$ 0.5
Unrecognized prior service credit	(2.2)	(2.3)	(11.8)	(14.4)
Unrecognized transition asset	(3.3)	(3.6)	—	—
Accumulated other comprehensive (income) loss at December 31	\$123.2	\$123.9	\$ (12.0)	\$ (13.9)
Plans with underfunded or non-funded projected benefit obligation:				
Aggregate projected benefit obligation	\$184.9	\$333.5	\$ 19.7	\$ 20.5
Aggregate fair value of plan assets	97.1	250.2	—	—
Plans with underfunded or non-funded accumulated benefit obligation:				
Aggregate accumulated benefit obligation	\$ 67.2	\$ 52.3		
Aggregate fair value of plan assets	9.1	0.3		

Table of Contents

The following table summarizes the components of net periodic benefit cost:

	Pensions			Other postretirement benefits		
	2007	2006	2005	2007	2006	2005
(In millions)						
Components of net annual benefit cost:						
Service cost	\$ 39.0	\$ 32.6	\$ 26.0	\$ 0.3	\$ 0.4	\$ 0.5
Interest cost	48.9	42.0	36.9	1.2	1.2	1.6
Expected return on plan assets	(62.8)	(53.2)	(45.5)	—	—	—
Amortization of transition asset	(0.6)	(0.6)	(0.5)	—	—	—
Amortization of prior service cost (credit)	0.5	0.5	0.8	(2.5)	(2.6)	(2.0)
Amortization of net actuarial loss (gain)	9.5	10.2	6.0	—	0.1	(0.1)
Net annual benefit cost (income)	\$ 34.5	\$ 31.5	\$ 23.7	\$(1.0)	\$(0.9)	\$—
Other changes in plan assets and benefit obligations recognized in other comprehensive income:						
Net actuarial loss (gain)	\$ 8.0			\$(0.7)		
Amortization of net actuarial loss	(9.5)			—		
Prior service cost	0.6			0.1		
Amortization of prior service (cost) credit	(0.5)			2.5		
Amortization of transition asset	0.6			—		
Total recognized in other comprehensive income	(0.8)			1.9		
Total recognized in net periodic benefit cost and other comprehensive income	\$ 33.7			\$ 0.9		

The estimated net actuarial loss, prior service cost, and transition asset for the defined benefit pension plans that will be amortized from accumulated other comprehensive income into net periodic benefit cost over the next fiscal year are \$3.6 million, \$0.3 million and \$0.6 million, respectively. The estimated prior service benefit for the other postretirement benefit plans that will be amortized from accumulated other comprehensive income into net periodic benefit cost over the next fiscal year is \$2.6 million. Prior service costs and the unrecognized actuarial losses are amortized on a straight-line basis over the average remaining service period of employees eligible to receive benefits under the plan.

Key assumptions—The following weighted-average assumptions were used to determine the benefit obligations:

	Pensions		Other postretirement benefits	
	2007	2006	2007	2006
Discount rate	6.02%	5.62%	6.50%	6.00%
Rate of compensation increase	4.00%	3.85%	—	—

The weighted average discount rate for pensions rose from 5.62% in 2006 to 6.02% in 2007, which resulted from increases in the discount rates used in determining the pension benefits for the U.K. and U.S. plans. The discount rate used for determining the U.K. pension benefit obligations grew from 5.00% in 2006 to 5.61% in 2007. Similarly, the discount rate used in determining U.S. pension benefit obligations increased from 6.00% in 2006 to 6.50% in 2007. The increases were attributable to the availability of higher yield securities in the market.

The following weighted-average assumptions were used to determine net periodic benefit cost:

	Pensions			Other postretirement benefits		
	2007	2006	2005	2007	2006	2005
Discount rate	5.62%	5.46%	5.82%	6.00%	5.80%	6.00%
Rate of compensation increase	3.85%	3.58%	3.94%	—	—	—
Expected rate of return on plan assets	8.46%	8.57%	8.56%	—	—	—

Our estimate of expected rate of return on plan assets is based primarily on the historical performance of plan assets, current market conditions and long-term growth expectations. Actual asset returns, net of expenses, have been 4.3%, 13.2% and 10.7% for the years 2007, 2006 and 2005, respectively. On trailing five-year and ten-year annualized bases, actual returns on plan assets have exceeded the expected rates of return.

Table of Contents

In September 2005, we adopted changes to the plan design and cost sharing structure for our pre-65 and post-65 retiree healthcare plans and integration of the Medicare Part D prescription drug component into our post-65 retiree healthcare plan. These changes, which were effective on January 1, 2006, resulted in a reduction in the benefit obligation of \$9.9 million.

For measurement purposes, 8.0% and 10.0% increases in the per capita cost of health care benefits for pre-age 65 retirees and post-age 65 retirees are assumed for 2008. The rates of increase are forecast to decrease gradually to 5% in 2011 and remain at that level thereafter. Assumed health care cost trend rates will not have an effect on the amounts reported for the postretirement health care plan since our benefit obligation under the plan was fully capped at the 2002 benefit level. Accordingly, a one percentage point change in the assumed health care cost trend rates would not have a significant effect on total service and interest costs or on our postretirement health care obligation under this plan.

Plan assets—Our pension plan asset allocation, by asset category, was as follows:

	December 31,	
	2007	2006
(Percent of plan assets)		
Equity securities	83.9%	84.9%
Insurance contracts	11.5	7.9
Cash	3.1	5.9
Debt securities	0.3	0.3
Other	1.2	1.0
Total	100.0%	100.0%

Our pension investment strategy emphasizes maximizing returns, consistent with ensuring that sufficient assets are available to meet liabilities, and minimizing corporate cash contributions. Investment managers are retained to invest 100% of discretionary funds and are provided a high level of freedom in asset allocation. Targets include: exceeding relevant equity indices, performing in the top quartile of all large U.S. pension plans and obtaining an absolute rate of return at least equal to the discount rate used to value plan liabilities.

Contributions—We expect to contribute approximately \$50 million to our pension and other postretirement benefit plans in 2008. The pension contributions will be primarily for the U.S., U.K. and Norway qualified pension plans. Additionally, the expected contribution amount includes the funding for projected lump sum payouts in our non-qualified pension plans. All of the contributions are expected to be in the form of cash. In 2007 and 2006, we contributed \$43.2 million and \$45.0 million to the pension plans, respectively, which included \$15.0 million and \$16.8 million, respectively, to the U.S. qualified pension plan.

Estimated future benefit payments—The following table summarizes expected benefit payments from our various pension and postretirement benefit plans through 2017. Actual benefit payments may differ from expected benefit payments.

(In millions)	Pensions	Other postretirement benefits
	\$	\$
2008	39.5	1.5
2009	38.3	1.6
2010	33.6	1.7
2011	37.0	1.8
2012	38.9	1.8
2013-2017	249.1	9.7

Savings Plans—The FMC Technologies, Inc. Savings and Investment Plan, a qualified salary reduction plan under Section 401(k) of the Internal Revenue Code, is a defined contribution plan. Additionally, we have a non-qualified deferred compensation plan, the FMC Technologies, Inc. Non-Qualified Savings and Investment Plan (“Non-Qualified Plan”), which allows certain highly compensated employees the option to defer the receipt of a portion of their salary. We match a portion of the participants’ deferrals to both plans.

Participants in the Non-Qualified Plan earn a return based on hypothetical investments in the same options as our 401(k) plan, including FMC Technologies stock. Changes in the market value of these participant investments are reflected as an adjustment to the deferred compensation liability with an offset to compensation expense. As of December 31, 2007 and 2006, our liability for the Non-Qualified Plan was \$38.0 million and \$27.7 million, respectively, and was recorded in other non-current liabilities. We hedge the financial impact of changes in the participants’ hypothetical investments by purchasing

[Table of Contents](#)

the investments that the participants have chosen. With the exception of FMC Technologies stock, which is maintained at its cost basis, changes in the fair value of these investments are recognized as an offset to compensation expense. As of December 31, 2007 and 2006, we had investments for the Non-Qualified Plan totaling \$28.3 million and \$20.7 million, respectively, at fair market value and FMC Technologies stock held in trust of \$5.4 million and \$4.5 million, respectively, at its cost basis.

We recognized expense of \$13.5 million, \$12.7 million and \$11.1 million, for matching contributions to these plans in 2007, 2006 and 2005, respectively.

NOTE 12. STOCK-BASED COMPENSATION

We sponsor a share based compensation plan, which is described below, and have granted awards primarily in the form of nonvested stock awards (also known as restricted stock in the plan document) and stock options. The compensation expense for awards under the plan for each of the years in the three year period ended December 31, 2007 is as follows:

	<u>2007</u>	<u>2006</u>	<u>2005</u>
(In millions)			
Stock-based compensation expense			
Restricted stock	\$24.2	\$18.1	\$12.0
Stock options	—	1.6	3.7
Other	1.7	1.2	0.8
	<u>25.9</u>	<u>20.9</u>	<u>16.5</u>
Income tax benefits related to stock-based compensation expense	\$ 9.6	\$ 8.2	\$ 6.4

Stock-based compensation expense is recognized over the lesser of the stated vesting period (three or four years) or the period until the employee reaches age 62 (the retirement eligible age under the plan). As of December 31, 2007, a portion of the stock-based compensation expense related to outstanding awards remains to be recognized in future periods. The compensation expense related to nonvested awards yet to be recognized totaled \$30.3 million for restricted stock. These costs are expected to be recognized over a weighted average period of 1.5 years.

Incentive compensation and stock plan—The FMC Technologies, Inc. Incentive Compensation and Stock Plan (the “Plan”) provides certain incentives and awards to officers, employees, directors and consultants of FMC Technologies or its affiliates. The Plan allows our Board of Directors (the “Board”) to make various types of awards to non-employee directors and the Compensation Committee (the “Committee”) of the Board to make various types of awards to other eligible individuals. Awards include management incentive awards, common stock, stock options, stock appreciation rights, restricted stock and stock units. All awards are subject to the Plan’s provisions.

An aggregate of 33.0 million shares of our common stock were authorized for awards under the Plan. As of December 31, 2007, 4.8 million shares are reserved to satisfy awards currently and 12.3 million shares are available for future awards granted.

Management incentive awards may be awards of cash, common stock options, restricted stock or a combination thereof. Grants of common stock options may be incentive and/or nonqualified stock options. Under the plan, the exercise price for options cannot be less than the market value of our common stock at the date of grant. Options vest in accordance with the terms of the award as determined by the Committee, which is generally after three years of service, and expire not later than 10 years after the grant date. Restricted stock grants specify any applicable performance goals, the time and rate of vesting and such other provisions as determined by the Committee. Restricted stock grants generally vest after three to four years of service. Additionally, most awards vest immediately upon a change of control as defined in the Plan agreement. A change of control is deemed to have occurred if (i) an individual or group acquires 20% or more of our then outstanding stock, (ii) a sale or other disposition of all or substantially all of our assets is consummated, (iii) a reorganization or merger is completed resulting in the shareholders immediately prior to the transaction holding 60% or less of the shares of the newly created corporation or (iv) a majority of the Board of Directors is replaced by means of an election contest or solicitation of proxies.

Stock-based compensation awards to non-employee directors consist of stock units, restricted stock and common stock options. Awards to non-employee directors generally vest on the date of our annual stockholder meeting following the date of grant. Stock options are not exercisable, and restricted stock and stock units are not issued, until a director ceases services to the Board. At December 31, 2007, outstanding awards to active and retired non-employee directors included 11 thousand vested stock options and 383 thousand stock units.

Table of Contents

Restricted stock—

A summary of the nonvested restricted stock awards as of December 31, 2007 and changes during the year is presented below:

(Number of restricted stock shares in thousands)	Shares	Weighted- average grant date fair value
Nonvested at December 31, 2006	3,192	\$ 17.49
Granted	1,040	\$ 33.11
Vested / Settled	(1,051)	\$ 12.13
Forfeited	(45)	\$ 20.95
Nonvested at December 31, 2007	3,136	\$ 24.42

In 2007, we granted time-based restricted stock awards, as well as awards with performance and market conditions. The vesting period for these awards is three years from the grant date.

For current year performance-based awards, the payout was dependent upon our performance relative to a peer group of companies with respect to EBITDA growth and return on investment for the year ending December 31, 2007. Based on results for the performance period, the payout will be 228 thousand shares at the vesting date in January 2010. Compensation cost has been measured for 2007 based on the actual outcome of the performance conditions.

For current year market-based awards, the payout was contingent upon our performance relative to the same peer group of companies with respect to total shareholder return for the year ending December 31, 2007. Based on results for the performance period, the payout will be 114 thousand shares at the vesting date in January 2010. Compensation cost for these awards has been calculated using the grant date fair market value, as estimated using a Monte Carlo simulation.

The following summarizes values for restricted stock activity in each of the years in the three year period ended December 31, 2007:

	2007	2006	2005
Weighted average grant date fair value of restricted stock awards granted	\$33.11	\$24.36	\$16.84
Fair value of restricted stock vested (in millions)	\$ 33.4	\$ 18.3	\$ 2.4

On January 2, 2008, restricted stock awards vested and approximately 965 thousand shares were issued to employees.

Stock options—

There were no options granted, forfeited or expired during the year ended December 31, 2007.

The following shows stock option activity for the year ended December 31, 2007:

(Number of stock options in thousands, intrinsic value in millions)	Shares under option	Weighted- average exercise price	Weighted- average remaining contractual term	Aggregate Intrinsic Value
Outstanding at December 31, 2006	3,136	\$ 10.45		
Exercised	(1,843)	\$ 10.44		
Outstanding and exercisable at December 31, 2007	1,293	\$ 10.45	4.8	\$ 59.8

The aggregate intrinsic value reflects the value to the option holders, or the difference between the market price as of December 31, 2007 and the exercise price of the option, which would have been received by the option holders had all options been exercised as of that date. While the intrinsic value is representative of the value to be gained by the option holders, this value is not indicative of compensation expense recorded by us. Compensation expense on stock options was calculated on the date of grant using the fair value of the options, as determined by a Black-Scholes option pricing model and the number of options granted, reduced by estimated forfeitures.

The intrinsic value of options exercised for each of the years in the three year period ended December 31, 2007 was \$59.5 million, \$51.0 million and \$20.9 million, respectively.

APIC pool—

In November 2005, the FASB issued Staff Position FAS 123R-3, "Transition Election Related to Accounting for the Tax Effects of Share Based Payment Awards," which allowed a one-time election to adopt one of two acceptable methodologies for calculating the initial additional paid in capital ("APIC") pool. During the third quarter of 2006, we elected to adopt the transition guidance for the APIC pool in paragraph 81 of SFAS No. 123R. The APIC pool reflects the excess tax benefits generated upon stock option exercise or restricted stock issuance when our allowable income tax deduction for the

Table of Contents

award exceeds the compensation expense recorded for book purposes. Subsequent to adoption, the APIC pool will be increased by tax benefits from stock-based compensation and decreased by tax losses caused when the recorded stock-based compensation for book purposes exceeds the allowable income tax deduction. As of December 31, 2007, our APIC pool totaled \$47.7 million.

NOTE 13. STOCKHOLDERS' EQUITY

Capital stock—The following is a summary of our capital stock activity during each of the years in the three-year period ended December 31, 2007:

(Number of shares in thousands)	Common stock issued	Common stock held in employee benefit trust	Common stock held in treasury
December 31, 2004	137,608	214	—
Stock awards	2,404	—	—
Treasury stock purchases	—	—	3,502
Net stock purchased for employee benefit trust	—	42	—
December 31, 2005	140,012	256	3,502
Stock awards	2,736	—	(548)
Treasury stock purchases	—	—	5,038
Net stock sold from employee benefit trust	—	(30)	—
December 31, 2006	142,748	226	7,992
Stock awards	411	—	(2,204)
Treasury stock purchases	—	—	7,882
Net stock sold from employee benefit trust	—	(56)	—
December 31, 2007	143,159	170	13,670

The plan administrator of the Non-Qualified Plan purchases shares of our common stock on the open market. Such shares are placed in a trust owned by FMC Technologies.

In February 2005, we announced plans to begin repurchasing shares subject to our four million share authorization by the Board of Directors. During 2005, we repurchased 3.5 million shares for \$63.9 million. In February 2006, the Board of Directors approved the repurchase of an additional ten million shares of our issued and outstanding common stock. In the year ended December 31, 2006, we repurchased 5.0 million shares for \$142.5 million. In February 2007, the Board of Directors approved the repurchase of an additional 16 million shares of our issued and outstanding common stock. There were 7.9 million shares repurchased for \$287.4 million in the year ended December 31, 2007. We intend to hold repurchased shares in treasury for general corporate purposes, including issuances under our employee stock plans. The treasury shares are accounted for using the cost method.

No cash dividends were paid on our common stock in 2007, 2006 or 2005.

On June 7, 2001, our Board of Directors declared a dividend distribution to each recordholder of common stock of one Preferred Share Purchase Right for each share of common stock outstanding at that date. Each right entitles the holder to purchase, under certain circumstances related to a change in control of FMC Technologies, one one-hundredth of a share of Series A junior participating preferred stock, without par value, at a price of \$95 per share (subject to adjustment), subject to the terms and conditions of a Rights Agreement dated June 5, 2001. The rights expire on June 6, 2011, unless redeemed by us at an earlier date. The redemption price of \$0.01 per right is subject to adjustment to reflect stock splits, stock dividends or similar transactions. We have reserved 800,000 shares of Series A junior participating preferred stock for possible issuance under the agreement.

Table of Contents

Accumulated other comprehensive income (loss)—Accumulated other comprehensive income (loss) consisted of the following:

	December 31,	
	2007	2006
(In millions)		
Cumulative foreign currency translation adjustments	\$ (1.2)	\$ (49.9)
Cumulative deferral of hedging gains, net of tax of \$16.4 and \$6.8, respectively	30.3	12.0
Cumulative deferral of pension and other postretirement benefit losses, net of tax of \$34.9 and \$35.7, respectively	(76.3)	(74.3)
Accumulated other comprehensive loss	<u>\$ (47.2)</u>	<u>\$ (112.2)</u>

NOTE 14. DERIVATIVE FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Derivative financial instruments— We hold derivative financial instruments for the purpose of hedging the risks of certain identifiable and anticipated transactions. In general, the types of risks hedged are those relating to the variability of future earnings and cash flows caused by movements in foreign currency exchange rates and interest rates. We hold the following types of derivative instruments:

Foreign exchange rate forward contracts—The purpose of this instrument is to hedge the risk of changes in future cash flows of anticipated purchase or sale commitments denominated in foreign currencies.

Foreign exchange rate instruments embedded in purchase and sale contracts— The purpose of this instrument is to match offsetting currency payments for particular projects, or comply with government restrictions on the currency used to purchase goods in certain countries.

Interest rate swaps—The purpose of this instrument is to hedge the uncertainty of anticipated interest expense from variable-rate debt obligations and achieve a fixed net interest rate.

We manufacture and sell our products in a number of countries throughout the world and, as a result, are exposed to movements in foreign currency exchange rates. Our major foreign currency exposures involve the markets in Western and Eastern Europe, South America, Asia, and Canada. The purpose of our foreign currency hedging activities is to manage the volatility associated with anticipated foreign currency purchases and sales created in the normal course of business. We primarily utilize forward exchange contracts with maturities of less than 3 years.

Our policy is to hold derivatives only for the purpose of hedging risks and not for trading purposes where the objective is solely to generate profit. Generally, we enter into hedging relationships such that changes in the fair values or cash flows of items and transactions being hedged are expected to be offset by corresponding changes in the fair value of the derivatives.

The following table of all outstanding derivative instruments is based on estimated fair value amounts that have been determined using available market information and commonly accepted valuation methodologies. Accordingly, the estimates presented may not be indicative of potential gains or losses on these agreements.

	December 31, 2007		December 31, 2006	
	Short Term	Long Term	Short Term	Long Term
(In millions)				
Assets	\$159.2	\$106.0	\$ 13.7	\$ 23.5
Liabilities	\$110.0	\$ 72.0	\$ 16.7	\$ 15.8

Hedge ineffectiveness and the portion of cash flow hedges excluded from the assessment of hedge effectiveness were a gain of \$5.7 million, a loss of \$1.9 million, and were not material for the years ended December 31, 2007, 2006, 2005, respectively. These gains and losses are recorded in cost of sales on the consolidated statements of income and in other expense, net in the reconciliation of segment operating profit to income before income taxes.

[Table of Contents](#)

Gains related to discontinued hedging relationships were \$7.5 million, \$3.8 million, and \$0.4 million for the years ending December 31, 2007, 2006, and 2005, respectively. These gains are recorded in cost of sales on the consolidated statements of income and in segment operating profit in the reconciliation of segment operating profit to income before income taxes.

Cash flow hedges of forecasted transactions, net of tax, resulted in accumulated other comprehensive income of \$30.3 million at December 31, 2007. We expect to transfer approximately \$16.4 million of that amount to earnings during 2008 when the forecasted transactions actually occur. All forecasted transactions currently being hedged are expected to occur by 2012.

At times we enter into derivative contracts, such as forwards, options, or collars, to create a hedge against exchange rate exposure for foreign currency movements. The exposures include assets and liabilities included on our balance sheet denominated in a currency other than the local functional currency, embedded derivatives, and fixed contracts bid in a foreign currency. These derivatives do not qualify as, nor are they designated as, hedges and therefore gains or losses for the period are recognized in earnings immediately. The gains and losses, net of remeasurement of assets and liabilities, recorded in earnings for instruments not designated as hedging instruments were a gain of \$21.7 million, and losses of \$1.6 million and \$5.0 million for the years ending December 31, 2007, 2006, and 2005, respectively. These gains and losses are recorded in other income (expense), net on the consolidated statements of income and in other expense, net in the reconciliation of segment operating profit to income before income taxes.

Fair value disclosures — The carrying amounts of cash and cash equivalents, trade receivables, accounts payable, short-term debt, commercial paper, and debt associated with revolving credit facilities, as well as amounts included in other current assets and other current liabilities that meet the definition of financial instruments, approximate fair value because of their short-term maturities. Investments and derivative financial instruments are carried at fair value, determined using available market information.

Credit risk — By their nature financial instruments involve risk including credit risk for non-performance by counterparties. Financial instruments that potentially subject us to credit risk primarily consist of trade receivables and derivative contracts. We manage the credit risk on financial instruments by transacting only with financially secure counterparties, requiring credit approvals and credit limits, and monitoring counterparties' financial condition. Our maximum exposure to credit loss in the event of non-performance by the counterparty is limited to the amount drawn and outstanding on the financial instrument. Allowances for losses are established based on collectibility assessments.

NOTE 15. RELATED PARTY TRANSACTIONS

FMC Corporation—FMC Technologies was a subsidiary of FMC Corporation until the distribution of FMC Technologies' common stock by FMC Corporation, which was completed on December 31, 2001.

In June 2001, FMC Corporation contributed to us substantially all of the assets and liabilities of the businesses that comprise FMC Technologies (the "Separation"). FMC Technologies and FMC Corporation entered into certain agreements which defined key provisions related to the Separation and the ongoing relationship between the two companies after the Separation. These agreements included a Separation and Distribution Agreement ("SDA") and a Tax Sharing Agreement, which provided that FMC Technologies and FMC Corporation would make payments between them as appropriate to properly allocate tax liabilities for pre-Separation periods.

As parties to the SDA, FMC Corporation and FMC Technologies each indemnify the other party from liabilities arising from their respective businesses or contracts, from liabilities arising from breach of the SDA, from certain claims made prior to our spin-off from FMC Corporation, and for claims related to discontinued operations (Note 17).

MODEC International LLC and MODEC, Inc.—Until 2004, we were a partner in the MODEC International LLC joint venture. MODEC, Inc. was the parent of our joint venture partner in MODEC International LLC. During 2004, we elected to exchange our interest in MODEC International LLC for cash and shares of MODEC, Inc. common stock, which we subsequently sold in 2005. In 2006, MODEC, Inc. purchased our Floating Systems subsidiary (Note 4).

Peledimia—The consideration provided for the acquisition of the CDS minority interest (Note 4) included a note payable for 6.8 million Euros, or \$9.9 million. The payee is owned by a member of CDS management and thus is considered a related party. The note, which is payable in two installments scheduled for 2009 and 2011, bears interest at 6%. Interest is remitted annually.

[Table of Contents](#)

NOTE 16. WARRANTY OBLIGATIONS

We provide warranties of various lengths and terms to certain of our customers based on standard terms and conditions and negotiated agreements. We provide for the estimated cost of warranties at the time revenue is recognized for products where reliable, historical experience of warranty claims and costs exists. We also provide warranty liability when additional specific obligations are identified. The obligation reflected in other current liabilities in the consolidated balance sheets is based on historical experience by product and considers failure rates and the related costs in correcting a product failure. Warranty cost and accrual information is as follows:

(In millions)	2007	2006
Balance at beginning of year	\$ 18.6	\$ 17.9
Expenses for new warranties	31.8	20.5
Adjustments to existing accruals	(1.6)	(1.8)
Claims paid	(23.8)	(18.0)
Balance at end of year	<u>\$ 25.0</u>	<u>\$ 18.6</u>

NOTE 17. COMMITMENTS AND CONTINGENT LIABILITIES

Commitments—We lease office space, manufacturing facilities and various types of manufacturing and data processing equipment. Leases of real estate generally provide for payment of property taxes, insurance and repairs by us. Substantially all leases are classified as operating leases for accounting purposes. Rent expense under operating leases amounted to \$66.8 million, \$52.9 million and \$36.8 million in 2007, 2006 and 2005, respectively.

Minimum future rental payments under noncancelable operating leases amounted to \$411.2 million as of December 31, 2007, and are payable as follows: \$48.6 million in 2008, \$42.9 million in 2009, \$47.8 million in 2010, \$43.0 million in 2011, \$43.2 million in 2012 and \$185.7 million thereafter. Minimum future rental payments to be received under noncancelable subleases totaled \$9.0 million at December 31, 2007.

In the second quarter of 2007, we acquired additional shares of a majority-owned subsidiary, CDS. See Note 4 for further discussion. We have an unrecognized commitment to provide consideration in 2011 to certain employees contingent upon earnings and continued employment. We are currently unable to estimate the payment, if any, that would be made in 2011.

Contingent liabilities associated with guarantees—In the ordinary course of business with customers, vendors and others, we issue standby letters of credit, performance bonds, surety bonds and other guarantees. These financial instruments, which totaled \$658.5 million at December 31, 2007, represented guarantees of our future performance. We also have provided \$35.8 million of bank guarantees and letters of credit to secure a portion of our existing financial obligations. The majority of these financial instruments expire within two years; we expect to replace them through the issuance of new or the extension of existing letters of credit and surety bonds.

We were primarily liable for an Industrial Development Revenue Bond payable to Franklin County, Ohio, until the obligations under the bond were assigned to a third party when we sold the land securing the bond. At December 31, 2007, the maximum potential amount of undiscounted future payments that we could be required to make under this bond is \$1.8 million through final maturity in October 2009. Should we be required to make any payments under the bond, we may recover the property from the current owner, sell the property and use the proceeds to satisfy our payments under the bond. Management believes that proceeds from the sale of the property would cover a substantial portion of any potential future payments required.

Management believes that the ultimate resolution of our known contingencies will not materially affect our consolidated financial position or results of operations.

Contingent liabilities associated with legal matters—We are named defendants in a number of multi-defendant, multi-plaintiff tort lawsuits. Under the SDA with FMC Corporation, which contains key provisions relating to our 2001 spin-off from FMC Corporation, FMC Corporation is required to indemnify us for certain claims made prior to the spin-off, as well as for other claims related to discontinued operations. We expect that FMC Corporation will bear responsibility for the majority of these claims. Claims of this nature have also been asserted subsequent to the spin-off. While the ultimate responsibility for all of these claims cannot yet be determined due to lack of identification of the products or premises involved, we also expect that FMC Corporation will bear responsibility for a majority of these claims initiated subsequent to the spin-off.

[Table of Contents](#)

While the results of litigation cannot be predicted with certainty, management believes that the most probable, ultimate resolution of these matters will not have a material adverse effect on our consolidated financial position or results of operations and cash flows.

NOTE 18. BUSINESS SEGMENTS

Our determination of our four reportable segments was made on the basis of our strategic business units and the commonalities among the products and services within each segment, and corresponds to the manner in which our management reviews and evaluates operating performance. We have combined certain similar operating segments that meet applicable criteria established under SFAS No. 131, "Disclosures about Segments of an Enterprise and Related Information."

Our reportable segments are:

- Energy Production Systems - designs and manufactures systems and provides services used by oil and gas companies involved in land and offshore, particularly deepwater, exploration and production of crude oil and gas.
- Energy Processing Systems - designs, manufactures and supplies technologically advanced high pressure valves and fittings for oilfield service customers; also manufactures and supplies liquid and gas measurement and transportation equipment and systems to customers involved in the production, transportation and processing of crude oil, natural gas and petroleum-based refined products.
- FoodTech - designs, manufactures and services technologically sophisticated food processing and handling systems used for, among other things, fruit juice production, frozen food production, shelf-stable food production and convenience food preparation by the food industry.
- Airport Systems - designs, manufactures and services technologically advanced equipment and systems primarily for commercial airlines, air freight companies, and airports.

Total revenue by segment includes intersegment sales, which are made at prices approximating those that the selling entity is able to obtain on external sales. Segment operating profit is defined as total segment revenue less segment operating expenses. The following items have been excluded in computing segment operating profit: corporate staff expense, net interest income (expense) associated with corporate debt facilities and investments, income taxes, and other expense, net.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Under the direction of our principal executive officer and principal financial officer, we have evaluated the effectiveness of our disclosure controls and procedures as of December 31, 2007. We have concluded that our disclosure controls and procedures were

- i) effective in ensuring that information required to be disclosed is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms; and
- ii) effective in ensuring that information required to be disclosed is accumulated and communicated to management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Management's Annual Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f). Our internal control over financial reporting is a process designed under the supervision of the Chief Executive Officer and Chief Financial Officer to provide reasonable assurance regarding the reliability of financial reporting and the preparation of our financial statements for external purposes in accordance with generally accepted accounting principles. Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control—Integrated Framework*, our management concluded that our internal control over financial reporting was effective in providing this reasonable assurance as of December 31, 2007. During the quarter ended December 31, 2007 there were no changes in our internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

The effectiveness of our internal control over financial reporting as of December 31, 2007 has been audited by KPMG LLP, an independent registered public accounting firm, as stated in their report which is included herein.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of FMC Technologies, Inc.:

We have audited FMC Technologies, Inc.'s internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO Criteria). FMC Technologies, Inc.'s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and

[Table of Contents](#)

dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, FMC Technologies, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of FMC Technologies, Inc. and consolidated subsidiaries as of December 31, 2007 and 2006, and the related consolidated statements of income, cash flows and changes in stockholders' equity for each of the years in the three-year period ended December 31, 2007, and our report dated February 29, 2008 expressed an unqualified opinion on those consolidated financial statements.

ITEM 9B. OTHER INFORMATION

None.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

Information regarding our directors is incorporated herein by reference from the section entitled “Board of Directors” of the Proxy Statement for the 2008 Annual Meeting of Stockholders. Our Board of Directors has three standing committees: an Audit Committee, a Compensation Committee and a Nominating and Governance Committee. Each of these committees operates pursuant to a written charter setting out the functions and responsibilities of the committee. The charters for the Audit Committee, the Compensation Committee and the Nominating and Governance Committee of the Board of Directors may be found on our website at www.fmctechnologies.com under “Corporate Overview – Corporate Governance” and are also available in print to any stockholder upon request without charge by submitting a written request to Jeffrey W. Carr, General Counsel and Secretary, FMC Technologies, Inc., 1803 Gears Road, Houston, Texas 77067. Information concerning audit committee financial experts on the Audit Committee of the Board of Directors is incorporated herein by reference from the section entitled “Committees of the Board of Directors – Audit Committee” of the Proxy Statement for the 2008 Annual Meeting of Stockholders.

Information regarding our executive officers is presented in the section entitled “Executive Officers of the Registrant” in Part I of this Annual Report on Form 10-K.

Information regarding compliance by our directors and executive officers with Section 16(a) of the Securities and Exchange Act of 1934, as amended, is incorporated herein by reference from the section entitled “Section 16(a) Beneficial Ownership Reporting Compliance” of the Proxy Statement for the 2008 Annual Meeting of Stockholders.

We have adopted a code of ethics, which includes provisions that apply to our principal executive officer, principal financial officer, principal accounting officer or controller and other key professionals serving in a finance, accounting, treasury, tax or investor relations role. A copy of our code of ethics may be found on our website at www.fmctechnologies.com under “Corporate Overview – Corporate Governance” and is available in print to stockholders without charge by submitting a request to the address set forth above.

ITEM 11. EXECUTIVE COMPENSATION

Information required by this item is incorporated herein by reference from the sections entitled “Director Compensation,” “Compensation Committee Interlocks and Insider Participation in Compensation Decisions” and “Executive Compensation” of the Proxy Statement for the 2008 Annual Meeting of Stockholders.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

Information required by this item is incorporated herein by reference from the section entitled “Security Ownership of FMC Technologies” of the Proxy Statement for the 2008 Annual Meeting of Stockholders. Additionally, Equity Plan Compensation Information is presented in Item 5 of Part II of this Annual Report on Form 10-K.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

Information required by this item is incorporated herein by reference from the sections entitled “Transactions with Related Persons” and “Director Independence” of the Proxy Statement for the 2008 Annual Meeting of Stockholders.

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

Information required by this item is incorporated herein by reference from the section entitled “Relationship with Independent Public Accountants” of the Proxy Statement for the 2008 Annual Meeting of Stockholders.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(a) The following documents are filed as part of this Report:

1. Financial Statements and Related Report of Independent Registered Public Accounting Firm:

Report of Independent Registered Public Accounting Firm

Consolidated Statements of Income for the Years Ended December 31, 2007, 2006 and 2005

Consolidated Balance Sheets as of December 31, 2007 and 2006

Consolidated Statements of Cash Flows for the Years Ended December 31, 2007, 2006 and 2005

Consolidated Statements of Changes in Stockholders' Equity for the Years Ended December 31, 2007, 2006 and 2005

Notes to Consolidated Financial Statements

2. Financial Statement Schedule and related Report of Independent Registered Public Accounting Firm:

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of FMC Technologies, Inc.:

We have audited the accompanying consolidated balance sheets of FMC Technologies, Inc. and consolidated subsidiaries (the Company) as of December 31, 2007 and 2006, and the related consolidated statements of income, cash flows and changes in stockholders' equity for each of the years in the three-year period ended December 31, 2007. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of FMC Technologies, Inc. and consolidated subsidiaries as of December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2007, in conformity with U.S. generally accepted accounting principles.

As described in Note 11 to the consolidated financial statements, effective December 31, 2006, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – an Amendment of FASB Statements No. 87, 88, 106, and 132R*, which changed the method of accounting for pension and postretirement benefits. As described in Note 1 to the consolidated financial statements, effective October 1, 2005, the Company adopted SFAS No. 123R, *Share-Based Payment*, modifying the method of accounting for share-based compensation.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of FMC Technologies, Inc.'s internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 29, 2008 expressed an unqualified opinion on the effective operation of internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of FMC Technologies, Inc.:

Under date of February 29, 2008, we reported on the consolidated balance sheets of FMC Technologies, Inc. and consolidated subsidiaries as of December 31, 2007 and 2006, and the related consolidated statements of income, cash flows and changes in stockholders' equity for each of the years in the three-year period ended December 31, 2007, which are included in the annual report on Form 10-K for the year ended December 31, 2007. In connection with our audits of the aforementioned consolidated financial statements, we also audited the related financial statement schedule, Schedule II – Valuation and Qualifying Accounts. This financial statement schedule is the responsibility of the Company's management. Our responsibility is to express an opinion on this financial statement schedule based on our audits.

In our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

- (1) The names of various active and inactive subsidiaries have been omitted. Such subsidiaries, considered in the aggregate as a single subsidiary, would not constitute a significant subsidiary. The Company is also a minority owner of certain other affiliates. These entities are not subject to inclusion in the determination of the Company's significant subsidiaries.
- (2) Percentages shown for indirect subsidiaries reflect the percentage of voting securities owned by the parent as of December 31, 2007.

CONSENT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
FMC Technologies, Inc.:

We consent to the incorporation by reference in the Registration Statements on Form S-8 (Nos. 333-62996, 333-76210, 333-76214, and 333-76216) of FMC Technologies, Inc. of our reports dated February 29, 2008, with respect to the consolidated balance sheets of FMC Technologies, Inc. and consolidated subsidiaries as of December 31, 2007 and 2006, and the related consolidated statements of income, cash flows and changes in stockholders' equity for each of the years in the three-year period ended December 31, 2007, and the related financial statement schedule, and the effectiveness of internal control over financial reporting as of December 31, 2007, which reports are included in the December 31, 2007 annual report on Form 10-K of FMC Technologies, Inc.

Our report on the consolidated financial statements refers to the Company's adoption of the provisions of Statement of Financial Accounting Standards (SFAS) No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – an Amendment of FASB Statements No. 87, 88, 106, and 132R*, which changed the method of accounting for pension and postretirement benefits as of December 31, 2006, and the Company's adoption of SFAS No. 123R, *Share-Based Payment*, which modified the method of accounting for share-based compensation as of October 1, 2005.

CHIEF EXECUTIVE OFFICER CERTIFICATION

I, Peter D. Kinnear, certify that:

1. I have reviewed this annual report on Form 10-K of FMC Technologies, Inc. (the “registrant”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c) evaluated the effectiveness of the registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d) disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and
5. The registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant’s auditors and the audit committee of the registrant’s board of directors (or persons performing the equivalent functions):
 - a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant’s ability to record, process, summarize and report financial information; and
 - b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant’s internal control over financial reporting.
