

Technip awarded four contracts for life of field services in the North Sea

December 19, 2013

Technip was awarded four contracts by Shell UK, Fairfield Energy, Ithaca Energy and TAQA during 2013. As the longevity of fields represents a key challenge for the energy industry, Technip aims to deliver a suite of subsea maintenance services including inspection, repair, maintenance, decommissioning, asset integrity management as well as brownfield construction.

More specifically, Technip has delivered, or is in the process of delivering, the following scopes of work:

- Diving operations to prepare for decommissioning of the Shell Delta Brent facilities, under a newly-awarded framework agreement to support its UK and Norway assets,
- Intelligent pigging operations for Fairfield Energy's Merlin field development (Completed September/October 2013),
- Light construction work for Ithaca Energy on the Causeway field,
- Conductor Centraliser maintenance services for TAQA's Harding field.

Technip's operating center in Aberdeen, United Kingdom, is managing the projects, scheduled for completion by the end of January 2014. The specialized work scopes, which equate to around 75 vessel days, have utilized the Group's diving support vessels, including the Orelia, Skandi Arctic and Skandi Achiever.

Steve Beddows, Business Manager of Life of Field Services (LOFS) at Technip, comments: *"We provide our clients with a complete range of life of field services with each scope demanding a specific set of core skills and expertise. We are keen to assist operators as they look to prolong the longevity of their fields in the UK Continental Shelf and beyond. The LOFS market is growing apace and these new awards underpin our capabilities in this area."*
